The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized version of an item from our Archives.

Usage guidelines

We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

About the Institute

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

lilies & a swamp
valley of Green River.

Rt. followed from
Somerset -
west on Ky. 80 to Russell
Springs; north on Ky. 35
to Durnville. then Ky 34 to
Nicholasville.

General Notes -

Road ascends slopes
of Turpin Branch

of Fishing Creek
through woods never
all cut.

Appears to be M.M. with
much beech. Also maple,
tulip, red oak - - - -
[should see in spring]

Enter S.E. corner of Casey
Co. - woods on both sides
of road, not fenced. That
to north seems better.
Flat & slightly rolling
but no ravines. Mild.
Karst topog. (?). Depressions
are swamp forest with
much sweet gum &
see plant listed.
Open part north of highway
with Andr. glom. & - grass
dominant, a striking

appearance.

Slightly higher places
have ferns & ericads,
though these not confined
to such places, but
swamp plants drop out
Only a few ft. diff. in
elevation.

Key. 35 goes through
much dissected area
with much forest.

Oaks prominent.

Poor M.M. or transition
from M.M. to more
western phase.

In places, beech & maple

Digitized by Hunt Institute for Botanical Documentation
prominent, in north slopes
& low.

mulberry.

Broad valley of Green River
has swampy strips,
ox-bows.
