The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized version of an item from our Archives.

#### *Usage guidelines*

We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

#### *About the Institute*

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

over for general  
notes

Near top of hill (going west) in Trimble Co, a l. s. ledge which is prob. Silurian forms low cliffs. Woods fair.

Across fields just east of Skylights, looks like very good meso. woods with beech ---

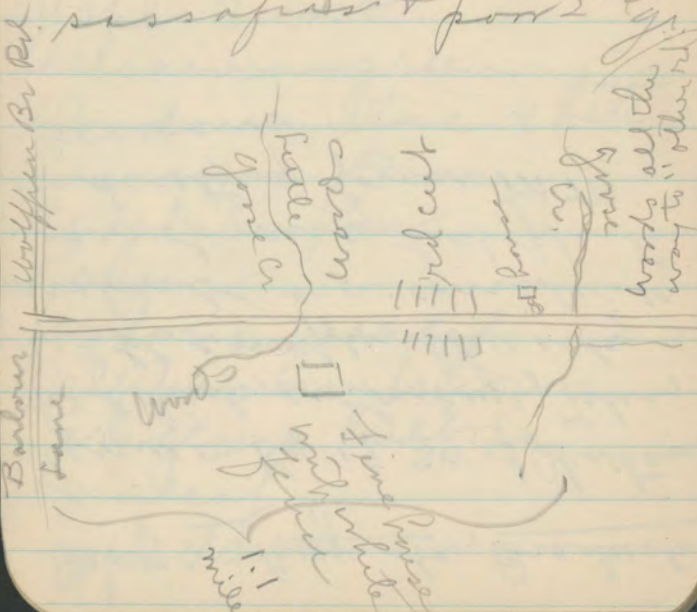

N. W. of Peacock Cottages across the fields, seems to be good woods.

At Prospect - a rd. (hard) goes toward the river - with sign → Belknap Beach

Digitized by Hunt Institute for Botanical Documentation

Woods in Little Goose Creek & Goose Creek is M. M. in aspect.

From about Skylights westward - large beech, s. maple - instead of much only sassafras & poor 2<sup>nd</sup> gr.

May 2 - Augusta, Bracken Co

Ravine in Ky. 19 SW of Chatham  
had beech, sw. hickory, Tilia,  
s. + bl. s. maple, blue ash,  
walnut + a considerable  
var. of meso. herb. plants  
indicating former M.M.  
in ravine
