The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized version of an item from our Archives.

Usage guidelines
We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

About the Institute
The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library’s activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

The woods is M.M.

On the north edge of the steep slope, much heather, along with some firs listed.

On a broader part of the creek flats, there is dominant with aspect something like creek flats at Crater Lake—maple, birch, etc., P.M., 1st July. All lost to here, mixed side of creek.

Over for general

Note.
Near top of hill (going west) the Emmett C. a h. s. ridge which is part Dendron shows fox cliffs. Woods fair.

Across fields just east Skyline looks like very good mass. woods both fresh.

W. W. of Penobscot Ten. across the fields, seems to be good woods.

At Prospect a red bell goes toward the pines --- until sign. Belgroove Beach.

Woods in Little Gone Creek & Gone Creek is M. M. in aspect.

From about Skyline eastward -change beech to maple instead of much only pines but from 200 yds.
May 2 - Augusta, Branch 6

Pawnee m Ky 19 SW of Chatham, had Beech, sweet Hickory, Elder, s. t. t. maple, blue oak, walnut & a considerable var. of moss, herb plants indicating former M. M. in parent.
