The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized version of an item from our Archives.

Usage guidelines

We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

About the Institute

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

Sensation

John says

Kent is popular
in Mexico.

Drum must be
picked promptly.

Drum and
Carré are small
compact trees.

Low temperatures
during flowering
seasons kills the
pollen of Haden.

Zamorano 20 July 1971

We don't need another greenhouse. The new Janice plant pathology department is a green house management has no place in this school.

Put new avocado orchard over by beehives

Send Ref. Alvarado comments on mangoes based on Florida

Arceuthobium - also
planting. Big
crop on row along
south side of planting.
Fruit of all sizes
same nature, others
all the way down
to walnuts. Eating
quality is typical of
Indo Chinese race.
good but it looks

as tho the small
fruits are dropping
and will not develop

~~Good~~ Kent

Good crop pretty
generally. Tree
erect, not spreading
Fruit a triple too
large, not all
ripe yet.

Drum

Tree rather low
and spreading
good crop on most
trees. Showy and
quality liked by all

Haben
