#### *About the Institute*

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

The book cover is a dark blue, textured material, possibly leather or cloth, with a complex embossed design. A wide, ornate border frames the cover, featuring a repeating diamond-shaped pattern with intricate scrollwork at the corners. In the center, a decorative, vertically-oriented label with a scalloped, Art Nouveau-style border contains the title. The label is divided into three horizontal sections by thin lines. The middle section is a solid dark band where the title is printed in a light, elegant serif font. Above and below this band are sections with a fine, repeating pattern. The entire cover is embossed with a subtle, large-scale floral or foliate motif.

Guatemala, 2 de agosto de 1938.

Señor Coronel don Isidoro Morales.  
Jefe Político y Comandante de Armas  
del Departamento de Huehuetenango.  
Huehuetenango.

Mi muy estimado Coronel:

Por medio de la presente me permito presentarle a la Señorita Helen Barsaloux, del Instituto de Arte de la ciudad de Chicago, quien acompañada de tres señoritas mas piensan permanecer en esa bella ciudad unos dos o tres días. Les he hablado mucho de tales lugares como Aguacatan, Chiantla y otros.

Cualquier atención que se sirva extenderles a mis recomendadas será grandemente apreciado por este su servidor y amigo.

  
Delfino Sanchez Latour.  
Presidente del Comité Nacional de Turismo.

## Love Blooms in Antigua

ONE OF THE most romantic weddings of the Winter, that of Helen Barsaloux and Wilson Popenoe of Guatemala, took place on Tuesday in the Chapel of the Holy Grail, on the University of Chicago campus.

The bride, a daughter of Mr. and Mrs. James G. Barsaloux, met her husband for the first time five months ago when she went to Guatemala to gather material for a lecture at the Art Institute.

Having read Louis Adamic's best seller, "A House in Antigua," she asked to be shown the famous house and was subsequently introduced to its occupant. He was Mr. Popenoe, who is associated with the United Fruit Company in Antigua.

When he and his bride return from a three months' honeymoon in South America they will make their home in the now celebrated home.

as a prominent stockholder and Dr. Glen Evans, whose political parties of this country, the United States, but not her husband, are making for Mrs. Dilling. She came here from the confirmation of Felix Frankfurter to a place on the United States

Dear Miss Barsaloux:

Under separate covers I take pleasure in leaving for you at the desk of the Palace Hotel a Picture Album of Guatemala, as well as a couple of booklets on tourism here, which I hope you will enjoy looking and reading over. Mind you claim them from the clerk at the desk of the hotel. In case I do not have the pleasure of seeing you tonight, I wish you all good luck and may you come back to Guatemala. I am also leaving, together with yours, another album for Miss Butterwick.

Sincerely yours,

## Here's a True Romance in Historic House in Antigua

Helen Barsaloux of Chicago was only 10 when she heard a lecture on Spain which started her toward a fascinating career and a fairy-tale marriage.

To the other children it was just another lecture, through which they wringed and whispered. To Helen it was, by all accounts, thrilling and, from that morning on she absorbed every scrap of knowledge about Spain she could find. She mastered the language. She saturated herself in its literature, art and culture. And by the time she was a sophomore in college she had won her parents' support to her fantastic dream of going to the University of Madrid for her junior year.

A year and a half in this continental atmosphere plus the usual difficulty of transferring credits, precipitated her decision to go into the Chicago Art Institute rather than return to an American college. She began by doing odd jobs in a department that needed extra help, but very shortly her extensive knowledge of Spanish art secured her a position as a full fledged extension lecturer, a triumph for a 20 year old.

### To Guatemala

After that each summer found Miss Barsaloux sailing off for Spain the moment her lecture schedule was completed. The arrangement might have gone along indefinitely had it not been for the Spanish civil war.

In 1933 it was Guatemala which Miss Barsaloux selected for her vacation trip—a country which for several hundred years had been a part of the Spanish empire.

In preparation she read everything available about its art, culture and people—including a book by Louis Adams entitled "The House in Antigua." It was a thrilling tale that traced the history of the house through 150 years of social and political prominence to the earthquake of 1773. Then followed its 150 years as a ruined makeshift home for natives—and its final restoration in 1930 by Dr. Wilson Popenoe, an internationally famous agronomist.

Naturally such a story was fascinating to Miss Barsaloux—and when she found a letter from the doctor offering permits to those who were particularly interested, she wrote to him at once. Within a short time she received the card of admission and a cordial letter expressing regret that a business trip would make it impossible for him to be in Antigua at the time of her visit.

### Doctor as Guide

But when she finally knocked at the huge oak door of the Casa Popenoe, at the House in Antigua was called in honor of its new owner, she found the doctor ready to act as

guide, thanks to a last minute change in his plans.

It was thrilling to stand in the beautiful patio with its towering cypress tree and linking fountain while the doctor retold the story she had found so interesting. In 1928 he and his wife, attracted by the shouts of the natives watching a cock fight in that very patio, had entered the ruined doorway for the first time. They, like Miss Barsaloux were Spanish art enthusiasts, and immediately saw through the chaos of earthquake and Indians to the grandeur and beauty which had distinguished the house in its days of official splendor.

### Filled With Natives

Immediately they began to investigate. They found that the main sala or drawing room which had been majestic in its 90 by 30 foot proportions, was at that time being used as the makeshift living quarters of four families of natives. The other rooms and courtyards had suffered a similar fate.

For several years, the doctor and his wife toyed with the idea of buying and restoring the house—not one whit influenced by the ribbing of their friends who thought them a little mad. They argued that it could

not only be a vacation house for them between business trips, but a museum of Spanish art as well. Finally in 1930 the purchase was made and the work begun.

### Wife Died

Four years later, when it was only two-thirds completed, Mrs. Popenoe died. With his interest in the house as a home thus blasted, he was glad to turn it over almost entirely to the thousands of tourists who flocked there each year. Marie, the Indian housekeeper, usually acted as guide.

Helen Barsaloux's charm and her appreciation and understanding of Spanish art, made her interesting, so the doctor offered himself as guide.

For five days the doctor helped her to study not only the Casa Popenoe, but all the Antigua which had been the beautiful capitol of Guatemala before the earthquake.

Six months later a marriage license was issued in Chicago to Dr. Wilson Popenoe and Helen Barsaloux. They are still honeymooning in the House in Antigua, the house that has been famous for more than 300 years. A true romance about the little girl who at the age of 10 fell in love with Spanish art.

## Daily News JAN 14. Announce

Helen Barsaloux, the daughter of Mr. and Mrs. James G. Barsaloux of East 70th street, and William Popenoe of Guatemala City, Guatemala, were married Tuesday morning in the Little Chapel at the University of Chicago. Miss Barsaloux, who has traveled extensively in Europe and the Orient, was a lecturer at the Art Institute. Her husband, the Guatemalan representative of an American company, is head of the art museum at Guatemala City, where the couple will live.

## WEDDINGS

Mr. and Mrs. James G. Barsaloux of 2320 East 70th street announce the marriage on Jan. 10 of their daughter, Helen, to Wilson Popenoe of Guatemala. The ceremony was performed in the chapel of the Holy Grail.

Mr. Popenoe and his bride will sail on Tuesday for a three month wedding trip to South America. Upon their return they will make their home in Guatemala City.

Tupper y señora; el señor George K. Volz y la señora C. J. Young.

Presentamos a todos los viajeros nuestro saludo de bienvenida.

Guatemala  
February 23

My dear Mrs. Popenoe,

Now that it's only two days until I must leave Guatemala, I realize that I shall not be seeing you again. I am sorry, as I have hoped ever since I had your first letter about coming to Guatemala that I should have a chance to know you. Better luck for my next visit.

Meanwhile let me thank you for your courtesy in letting me bring the Third Seminar in Guatemala to your house. I realize that there are disadvantages to living in the best known house in the country, and I greatly admire your skill and delicacy in meeting it. It was a real pleasure to all of us.

Most cordially yours

*Gene  
Hoy*

Jamaica - July 24 to November 20, 1939  
arrived at Oracabessa on S.S. Tetela - left by plane to Santiago, Cuba.

#### U.F. CO. AGRICULTURAL EXPERT HERE WITH FAMILY

Dr. Wilson Popenoe, D.Sc., Agricultural Expert of the United Fruit Company, arrived in the "Tetela" on Monday from Santa Marta, Colombia, to take charge of the company's extensive leaf spot control campaign in the island for an indefinite period. With him are his wife and daughter, Miss Nancy, who are making their first acquaintance with Jamaica.

Glenn. July 25.

### Scientist To Take Part In War On Leaf Spot

**D**R. WILSON POPENOE, Agricultural Scientist of the United Fruit Co., is in Jamaica to take part in the large-scale Anti-Leaf Spot Campaign being conducted by the Government, with the collaboration of the three fruit companies.

Dr. Popenoe, his wife and daughter, Nancy, arrived from Santa Marta, Colombia, on Monday in the "Tetela" at Oracabessa.

Seen at Myrtle Bank Hotel yesterday, the doctor told the "Standard," "I am here for an indefinite stay. I was asked by Mr. Bradshaw, Manager of the United Fruit Company, to come here to help in the part the Company is playing in the present Anti-Leaf Spot Campaign in Jamaica.

#### WORK IN COLOMBIA

"Before coming here I spent quite a long time in Colombia, where I was loaned to the Government for agricultural work, not wholly Leaf Spot."

Asked if he had anything new to say in regard to the treatment of Leaf Spot disease, the doctor replied in the negative.

After spending her summer vacation in Jamaica, his daughter will return to school in the United States. This is her first visit to the island, and is also the first time that the doctor's wife has come to Jamaica.

To Help  
In Fight  
Against  
Leaf  
Spot

Dr. Wilson Popenoe, Agricultural Scientist of the United Fruit Company, photographed with his wife and daughter, Nancy, at the Myrtle Bank Hotel yesterday. The Doctor is here for an indefinite period to work in the Anti-Leaf Spot campaign being conducted by the Government with the collaboration of the three Fruit Companies.

EXPERT FARMER  
HERE TO FIGHT  
BANANA MENACE

U. F. Co's Dr. Popenoe In  
island, Joining Battle  
Against Leaf Spot.

DR. WILSON Popenoe, D.Sc., agricultural expert of the United Fruit Company, whose official designation is that of Agricultural Assistant to the Vice President of the Company is back in Jamaica.

At the request of Mr. Thomas Bradshaw, local manager of the United Fruit Company, he has come to take charge of the Company's extensive leaf spot control programme and will travel throughout the island offering his advice on this disease, of which he has wide experience in Central and South America and the West Indies.

His stay in the island will be indefinite. "I do not know how long I will be here for, but I hope it will be several months," he told a Gleaner representative yesterday at the Myrtle Bank Hotel, as he discussed the mission for which he has come.

Eighteen months ago Dr. Popenoe visited when the Leaf Spot disease was in its initial stage. Since then he has been carrying out agricultural investigations for his Company in Honduras, Colombia and Guatemala. Just recently he had been loaned to the Colombian Government to carry out general agricultural work in the interior of that Republic.

"Travelling Farmer" is what Dr. Popenoe's associates call him, so great a traveller is he in the interest of agriculture in the Caribbean, and other lands. With his wife and daughter, Nancy, who are making their first acquaintance with Jamaica he has now come from Santa Marta, Colombia, in the "Telata."

TROUBLE EVERYWHERE.

"There can be no doubt that Leaf Spot is causing trouble everywhere," Dr. Popenoe declared, as he referred to the various countries that have been gripped by the disease. The first record that they had had of the disease causing any damage in the West Indies was in Dutch Guiana some seven years ago, he said, and since then it had caused havoc in many banana producing countries in the Caribbean.

"The disease is under control in some countries," he stated, "but in several places it has done very great damage, as in Mexico, Cuba,

certain parts of Central America and Colombia. The Government of Colombia has a programme of control which it has recently organized. In fact, it is following Jamaica's lead in its methods of spraying."

Dr. Popenoe agrees that the Leaf Spot, like all other fungus diseases, is influenced very strongly by weather conditions. "That is one of the major features in its behaviour," he said, "and that is why there has to be a continuity of policy in the fighting of the disease. You have to maintain control." he advised. "In other words, you have to adopt the Biblical injunction: 'Be not weary in well doing.' You have to keep it up. You cannot spray a few times and then stop and forget about it."

Mrs. Popenoe is already enamoured with Jamaica on her first visit and is confident that she "will like it." His daughter, Nancy, will be here for only a few weeks as she has to return to school in the United States at the end of her summer vacation.

## Our Old Houses And Furniture Fascinate Newcomer To Island

I FOUND Mrs. Popenoe sitting on the verandah at the Myrtle Bank Hotel looking cool and chic in a beautifully fitting flowered linen dress. Pointing to a chair beside her Mrs. Popenoe said "I am so sorry I have so little time to spare but with my many social engagements as well as accompanying my husband on his tours of the island, my time has been very fully occupied since arriving in Jamaica". "Why, she continued, I have not even been to the Carib, yet, which I hear is a very fine theatre. But when my daughter, Nancy, leaves I shall have more time, as she is only with us for her holidays and is returning to the States on Sunday, and naturally I want to be with her as much as possible before she goes.

### INTERESTING RELICS.

When asked to give her impressions on Jamaica, Mrs. Popenoe, who is an eloquent and interesting conversationalist as well as a widely travelled woman said:

"We who live in Latin America, and are interested in the background of the Spanish-speaking republics, naturally find much to fascinate us here in Jamaica. You have so many fine relics of the early days: such splendid old mansions on the slightly hill-tops of St. Ann and other parts of the island; a few fine churches of the Georgian period, which remind us forcibly of many which are still to be seen in Virginia; the old torts, such as Augusta and the crumbling remains at Port Royal with their memories of Nelson. Perhaps I am most attracted to the old residences, be-

cause it happens that our home in Guatemala is an old Spanish Colonial house of the seventeenth century. We took this house, which was partly wrecked by the earthquake of 1773, the catastrophe which practically destroyed the old Spanish capital of Central America, and we rebuilt it, changing not a single detail of its construction. Then we brought together furniture of the period, and old portraits of the Dons who walked the streets of Guatemala in the "dear dead days beyond recall", and we tried to make the place live again, we tried to make it tell, to those who visit it to-day, something of the life that was, something of the Guatemala of three hundred years ago.

### OLD HOMES.

Here in Jamaica you have many similar cases—fine old houses which have been kept in good condition—fortunately the island has suffered less from earthquakes than many parts of Central America, though it has suffered heavily at times. These houses are still filled with the fine old mahogany furniture of the eighteenth century. Only a few days ago we had the pleasure of week ending in one of them—Widcombe, just a few miles down-town from Kingston. I think it would be splendid if more of the old homes could be kept in this way. For, much as we devote ourselves to the present, we should not forget the past, particularly when the past is so rich and romantic as that of Jamaica. There is so much here that is worth preserving for future generations; so much which tells us of great days and great deeds.

Naturally, there are many items which can and should be preserved in a museum, rather than in private homes. This is particularly true of valuable objects of art, and remains of our primitive civilizations. Perhaps I feel this more strongly, because of having been associated for some years, myself, with the museum of the Art Institute of Chicago. Anyway, I have lost no time in visiting your museum here—that of the Institute of Jamaica; and I have been agreeably surprised. I wonder if Jamaicans as a whole realise what a wealth of material is to be found at the Institute? The library is tremendously valuable. The collection of portraits of the early Governors and other worthies is quite unique in this part of the world. I feel sure, and those three old carved Arawak figures! How much they tell us of the cultural achievements of the pre-Columbian Jamaicans! It is encouraging to note that the Museum is being provided with added housing for its rich collections, and I hope Jamaicans will unite in trying to make these as complete as possible, for there must still be many valuable specimens at large in the island, which could and should be preserved here for generations to come.

### FRANK CUNDALL.

I wish I could have known Frank Cundall. One feels so strongly his presence when visiting the Institute just as one taking up the study of Jamaican history finds evidence of his scholarship on every hand.

(Continued on page 17)

## Old Houses and Furniture Fascinate Newcomer

Continued from page 16

What a savant he must have been! And everyone who knew him seems to have loved him. My husband, who had that privilege, felt that he was a peculiarly human character; one of those scholars who let their knowledge serve to make them more human instead of more aloof from the everyday world. I hope Jamaica will not forget Frank Cundall. And she will not. Some day we may see the right sort of a monument to him here in the island; not a shaft of marble, I think, but a greater Institute, serving in a wider manner than ever the cultural interests of the Island. This, I believe, is what he would have wished, and is precisely what will be realized under the able leadership of Mr. Sherlock, present Curator of the Institute.

M. W.

# LEAF SPOT ON INCREASE

Methodical Spraying Only Means of Keeping Down  
Dangerous Banana Disease.

**D**URING the past few weeks Leaf Spot has definitely been on the increase in many parts of Jamaica, according to Dr. Wilson Popenoe, Leaf Spot expert of the United Fruit Company, who returned to Jamaica a month ago and has just completed a survey of the situation. He advocates that every planter should "look upon spraying as an integral feature of the banana industry."

When interviewed yesterday by a representative of the "Observer" Dr. Popenoe pointed out that the best farms to be seen to-day are unquestionable those where there was no let-up in spraying after the October-November storms. Unfortunately the expense and labour connected with rehabilitating farms after those disastrous days caused some growers to forget momentarily that Leaf Spot control is a matter of prevention more than one of cure. In other words, spraying must be commenced in advance of serious infection, not afterwards.

In commenting on this feature, Dr. Popenoe said:  
"The storms destroyed most of the mature plants which are those on which infection is usually most evident. This gave many growers, inexperienced in dealing with the disease, a feeling of false security. They saw little infection on the followers which remained after their farms were cleaned up, and delayed spraying until recently when these began to show serious spotting; now it will be

**A HARDER JOB**  
than would have been the case if they had sprayed regularly all the time. This is something which we should all remember in the future.

It is a real pleasure to see the farms of those growers who kept to their spraying schedule in spite of the blow-down. They offer a marked contrast to those which were not sprayed during November, December and January. "It is also encouraging to note that many growers are planning to instal galvanised iron pipe lines throughout their farms to facilitate spraying operations. Where large acreages are concerned this is certainly a step in the right direction.

"There is another point which we should all bear in mind; control, to be profitable, must not only result in a stem of fruit from each plant; it must result in a stem of good fruit. It is possible to have a considerable amount of infection present and still get fruit, but the grower wants good fruit—as many % as possible, not 6's and 7's. The plants must be kept fairly free of Leaf Spot if this is to be achieved."

When asked how the Government's Leaf Spot Control campaign is progressing Dr. Popenoe replied:

"Every month more growers are starting to spray; the three companies are actively engaged in issuing equipment based upon inspection of farms and approval by the Board's officers, and we are much better prepared this year to do a good job than we were last year.

"Naturally, it takes time for a planter to master all the details which together make up a good spraying job. The three companies, as well as the Government's officers and the Agricultural Instructors of the Jamaica Agricultural Society

## ARE DOING ALL POSSIBLE

to assist growers along this line. In some quarters Bordeaux mixture is not yet prepared as well as it should be. We are firmly convinced that the addition of weak copper solution to a thick milk of lime gives the best mixture; that is, one which will stick longest on the plant.

"Some growers are not yet obtaining good coverage; on the other hand, there are many who realise that spray nozzle must not be held too close to the plant else the spray mixture will form large globules on the leaves instead of covering them with a thick mist. The use of a clean disc is an aid to this end. When the hole in the disc becomes enlarged by use, a good job can no longer be done."

## FUTURE OUTLOOK

What about the future, asked our Representative.

"It has become necessary" replied Dr. Popenoe, "to look upon spraying as an integral feature of the banana industry, just as we look upon pruning, irrigating, ceasing and fertilising. Speaking of this last point I would like to add that it is gratifying to notice the increase of interest recently shown by Jamaican banana growers in this subject. It has been our feeling ever since the Leaf Spot Control campaign was inaugurated that regular and periodic application of fertilisers would be the next step on all Jamaican farms.

The argument is simple: it costs just about as much to spray a poor farm as it does a good one, and by judicious use of fertilisers more fruit can be obtained without materially increasing the cost of spraying which now constitutes one of the major items of expense in connection with banana production. Many Jamaican farms have been producing bananas for years. A lot has been taken out of the soil and nothing has been put back. It is becoming obvious that a rational system of maintaining soil fertility must be adopted. Mr. Croucher, Agricultural Chemist of

the Department of Agriculture, has been preaching this ever since he came to the Island. The time seems to have arrived when all enlightened banana growers agree with him. Of course, fertilising will not solve all our problems; it must go hand in hand with good tillage and other cultural practices.

Dr. Popenoe leaves tomorrow by the "Quiriqua" for Central America on a tour of leaf spot control inspection. He hopes to return to Jamaica in another month or two.

## Dr. Wilson Popenoe On

# How To Spray Leaf Spot Diseased Banana Plants

"THE widely different climatic conditions which prevail in different sections of Jamaica are strongly reflected in the behaviour of Banana Leaf Spot disease," said Dr. Wilson Popenoe, in charge of the United Fruit Company's part in the Leaf Spot Control programme, in a "Standard" interview yesterday.

"In several sections where there have been frequent rains for the past several months, the disease has now reached a virulent stage and will result in heavy fruit losses in the near future." Continuing Dr. Popenoe said: "In other places, for example on the south coast of Kingston east ward, the progress of the disease has been slow, and many growers have not yet found it necessary to commence spraying their plantations."

When asked by our reporter, "Just when should spraying commence?" he said: "When there is light scattered infection more or less throughout the plantation. This means," he explained "that the elongated black spots which are typical of the primary stage of the disease, can be found on at least one or two leaves on the majority of trees. To start spraying earlier—before there is any visible infection at all—is to waste money. To wait longer, until many leaves show large patches of dead tissue—the burning stage—is to risk serious damage to the crop."

### CONTROL PROGRAMME

Speaking on the progress of the Government's control programme throughout the island, the doctor said it was progressing as rapidly as possible under the circumstances. "The tremendous demand for spraying equipment," he said "which manifested itself immediately after the programme became effective in August, threw such a burden on the manufacturers of these equipments that some of them have been slow in filling the orders of the Board. As rapidly as equipment has reached the island it has been placed in service. What we now need is to use this equipment effectively."

"Proper spraying involves, in the first place, the limitation of spraying to plantings where the disease has not progressed to the stage where effective control can no longer be secured," he continued. "Today many plantings exist which have been so badly damaged by the disease that it is useless to commence spraying without first cutting back the old plants. Followers five or six feet in height have not yet had time to be injured severely. These can be sprayed and a good crop obtained from them."

### ASK FOR ADVICE

"In doubtful cases it is highly desirable that growers ask the advice of some experienced person before cutting back, or before commencing to spray before cutting back. It is precisely this type of problem which perplexes the average man and in many cases we believe we can be of assistance to him in arriving at a sound decision," he said.

"Once spraying has been commenced, it must be done regularly," he advised.

"The Banana Leaf Spot Control Board is recommending a three weeks cycle which at this season of the year—when rain can be expected—is sound. In dry weather when the progress of the disease is slow control is an easy matter; but during periods of wet weather Leaf Spot often takes on an epidemic form which gets out of hand in a few weeks' time."

### THINGS TO TAKE CARE OF

"Travelling around the island and witnessing the spraying which is being done, I have been able to make a few observations which suggest lines along which the grower should exercise extra care in the first place. Bordeaux Mixture is not an easy thing to prepare. That is to say, good Bordeaux Mixture is not. The secret is to pour weak copper solution into a strong lime solution. Then strain the mixture carefully before you commence spraying so that the nozzle will not be clogged with grit. Maintain uniform pressure with the spray pump—a good pressure at all times. Do not hold the nozzle of the spray gun close to the leaves but keep it several feet away so that the vaporized Bordeaux will fall upon the leaves like a heavy fog. Cover both surfaces of the leaves thoroughly, from the tip to where they join the trunk. Above all use a good quantity of spray mixture the first time you spray," he concluded.

### BACK IN CONNECTION WITH LEAF SPOT

Dr. W. Popenoe (right) and Mrs. Popenoe arrived yesterday by the s.s. Quirigua from Cristobal. The doctor, it is understood, has come on a tour of inspection in connection with leaf spot. He was down here last autumn in charge of the leaf spot campaign.

### Dr. Wilson Popenoe Returns To Island

United Fruit Company's Dr. Wilson Popenoe and Mrs. Popenoe arrived here yesterday by the S.S. Quirigua from Cristobal.

The doctor has presumably come on a tour of inspection in connection with the leaf spot campaign. He told a "Gleaner" representative that he had been sent for by the United Fruit Co. but could give no further information. Dr. Popenoe was down here last autumn in connection with the Leaf Spot campaign.

DR. AND MRS. POPENOE arrived last Sunday in the "Quirigua" from Cristobal. The doctor has presumably come in connection with the noted "leaf spot" and with all our hearts we wish

Gleane Feb 19  
Gleane 7-10-40

him success in his campaign against it.

### House in Antigua.

There's a fascination frantic, in a ruin that's romantic, quotes Louis Adam in his book, *House in Antigua*. The chateleine of the famous house in Antigua, Guatemala, which no longer is a ruin, is visiting in Chicago. She is Mrs. Wilson Popenoe, wife of the head agronomist of the United Fruit company, who oversees production on 100,000 acres of banana plantations in seven or eight middle American countries. Originally built by a Spaniard sent to Spain's colony in 1630, the house later was reduced to ruins by an earthquake. Dr. Popenoe, strolling by the ruins in the late '20s, saw a cock fight going on among the roofless pillars and, entering the ruined court, saw a magnificent 70 foot cypress tree. Eventually, largely because of the tree, he bought the house and restored it, and the great cypress stands in the center of the tree, he bought the cypress tree. Eventually, largely because of the tree, he bought the less pillars and, entering the ruined court, saw a magnificent 70 foot cypress tree. Eventually, largely because of the tree, he bought the house and restored it, and the great cypress stands in the center of the new restored patio. House and furnishings are in old Spanish style, say visitors to Guatemala who have seen it.

"We have no electric lights, no radio, and no telephone," Mrs. Popenoe, who was formerly Helen Barsaloux of Chicago, told friends at luncheon at the Arts club. "And we have a solar water heating system. Water for showers is heated in pipes exposed to the sun."

PLAN TO VISIT NEW YORK WORLD'S FAIR

SHELTON HOTEL  
NEW YORK

April 25, 1940

Dear Helen -

Excuse this hasty scrawl in  
the pencil. I'm in N. Y. caught in a  
whirl of appointments, etc.

I rec'd your letter two days ago  
& thought I might be able to be in  
Clyde on the 28<sup>th</sup>. Now, unfortunately, I  
find that I can't be. I'm terribly sorry,  
as I want to meet you very much & to  
talk with you about Wilson's book.  
And I can't be in N. Y. <sup>with</sup> late next  
week, in time to see you off.

Please be sure to let me know,  
as far in advance as possible, next time  
you or Wilson, or both of you, come

[This is the second of a series of stories on a recent expedition to Central America. The next will appear in an early issue.]

By Anson Brown.

We had the ship well in hand by the afternoon of the second day. That is, about 15 of us, all strangers

**ABOARD THE SANTA MARTA,** had now banded together to make our own fun.

"You've put out good cold cash for your ticket," I told myself, "now make the most of it!" If a boat ever turned out to be stuffy I would always blame myself. But how does one go about getting acquainted? Experience helps, but a little brass goes even farther.

I saw her as she came up the gangway just before our New Orleans departure. She was brunet, trim, as tho she had just stepped from an exclusive shop on Michigan avenue. Apparently she was alone. But even as we sallied away toward the mouth of the Mississippi she ensconced herself in a deck chair and buried her nose in the bells that were tolling for Ernest Hemingway.

I walked around the deck three times before I got up the courage to trip over the footrest of her deck chair. "O, that's all right," she muttered and continued devouring revolution after war in her best seller.

Tactic No. 2: I filled the empty deck chair beside her. That is, I sprawled my full length in it. "Beautiful sunset," I vouchsafed.

"Uh, huh."  
 "Would you care for a cigaret?"  
 "Nope, thanks." There was a sudden, icy breeze.

Tactic No. 3: Cocktail party. She was sitting alone at the bar.

Boldly sit down next to her and ask her if she would like a martini. "Thank you, no. I'm waiting for my husband."

Then friend husband appears, smiling and congenial. Even introduces himself and wife.

Thus I meet Earl and Elvie Stumpf from New Orleans. They already have become acquainted with the honeymooners, Annie and Fred Greger of Hamilton, O., who join us a few minutes later.

The Gregers have just met the two American pilots and their wives. So by the time the second call for dinner has sounded we have taken over one whole end of the cocktail lounge. When we fall to heed the second call, the head dining room steward appears and demands my presence. It seems I have been assigned to the captain's table, and the master of the ship has been waiting for a whole hour for me to come to dinner.

But the captain's table isn't as bountiful as I anticipated. The Stumps help to liven things up, and I am seated next to Mrs. Wilson Popanoe, formerly Helen Barsaloux of Chicago, chatelaine of the restored Guatemala house made famous by Louis Adams in his book, "The House in Antigua."

[More about the Popanoes later.]

Life aboard ship soon becomes as closely defined as life in a small town. There are missionaries; spinsters; an elderly couple finally enjoying their life's savings; honeymooners; noisy children; and a few college students, and the town inebriate who hasn't drawn a sober breath since his foot first touched the gangplank. The gossip is just the same small talk one hears at home. The kids raise a bedlam all afternoon at the shuffleboard table and tries vainly to sing the "Hut Hut" song.

We turned to bridge in the early afternoon, and, tiring of that, took long sun baths in a glorious setting, with the ocean rolling away to a blue green horizon on all sides.

At one point we passed the tip of Yucatan, and the captain gave us his binoculars so that we might view one of the Mayan temples deserted there years ago, after the Spaniards had made their conquest.

It was this first far away view that

started that adventuring urge surging anew within me. Here was great antiquity on our own continent. Central America is full of such examples of crumbling architecture—many still undiscovered, many still full of unknown wealth in jade and gold. Even if I couldn't find jade or gold, at least I could capture their ancientness with my camera. I was to spend at least two months in Guatemala, and I had vowed to get into the interior and see a few of these ruins at close hand.

In an hour or so we're going to land at Puerto Barrios, where I am to leave the ship. There are green tropical hills looming up in front of us. It will take time to cross this smooth harbor and creep in alongside the pier.

A few moments ago the Gregers called me out on deck in a great hurry. I race up to the bow and look down on the water. At first I think it is the same old thing—flying fish. But these little fellows shoot out of the depths and run across the surface of the water on their tails. And they go for two or three hundred yards before they splash in again. I learn that they are called needle fish.

Fish that walk on the water! I wonder what Alice in her Wonderland would say to that. I see them with my own eyes, and I record the incident in good faith. It is high noon. I'm sure we aren't seeing things. Besides, the bar has been locked all morning.

### Mrs. Bennett Has Bogota Visitor

Mrs. Wilson Popenoe of Bogota, was the guest Sunday of Mr. and Mrs. George S. Bennett, of the United Fruit Company, at their home in Cristobal. Mrs. Popenoe left Monday for Panama City for a visit with Mr. and Mrs. Graham Fairchild. She is the wife of Dr. Wilson Popenoe, well known agriculturist of Bogota, Colombia. Dr. Popenoe arrived Wednesday by Panama plane to join Mrs. Popenoe. They will return to the Atlantic Side and sail Thursday on the Veragua for the States.

### Christmas in Guatemala

"The Archbishop of Guatemala was here in Antigua for a week, and on Christmas morning he said a High Mass at 5 a. m. It was in the ruins of the 17th century Cathedral—all that remain are the lovely walls and a bit of the Altar, and it's roofless. Of course it was pitch dark, and we could feel the pine needles under our feet as we walked down the nave—a temporary altar had been put up in the old place, with a huge Crucifixion, at least ten or twelve feet tall, and six enormous candles on each side; that was all the light. As sunrise came, we could make out the red chair, the red and gold brocade on the altar, and the red carpet. The singing was heavenly and the vestments gorgeous; soon the blue sky came, and it seemed like such a fitting roof for the old church. All the Indians, at least 200, from one of our most colorful villages, Santa Maria de Jesus, were down and their costumes made great splotches of color. I do wish you could have been here—the Church is much more dramatic here than in the States, and it does mean so much to these dear people."

quien que sea cliché  
en los deseos de  
umilde recordora  
Angelita Díaz

Antigua P. R. de Febrero de 1948

Querida Doña

Olivia R. de Ponce

Respetable Señora

Honduras

Deseo que cuando mi presente llegue  
a sus manos se encuentre gozando de completa  
salud, al lado del Señor pues con siempre más  
hijos desearé. pues aquí en la casa todos sin novedad.  
Reciba recuerdos y un abrazo de la Espiridiana y de  
Doña Esmelda que siempre la recuerda. La mamá  
le manda un abrazo y que pase el día muy fe-  
liz y dichoso al lado del P. P. con la familia de  
Silvia la quiere.  
Reciba un abrazo de Julia Emilia y de su  
afecticísima y P. P.

Victoria Ponce

## Llegan más Delegados al C. de Agricultura

Delegados al Congreso Interamericano de Agricultura, que arribaron ayer. De arriba, e abajo: Dr. Leopoldo Barrientos, de El Salvador; Dr. Wilson Popenoe, de Honduras, e ingeniero Antonio Arena, de la Argentina.

Alguno de la primera plana

## Llegaron Otros dos Delegados

Luis Murillo (arriba) e Ignacio Argucia, delegados de Colombia y Honduras, respectivamente, al Congreso Interamericano de Agricultura.

ANOCHÉ salió Eduardo Enrique Rios para los Estados Unidos, invitado por el Departamento de Estado para visitar universidades y bibliotecas. IGUAL invitación se ha hecho al autor de "La tierra del faisan y del venado", Antonio Madro Bolfo. ANTES de salir dijo Medice Bolfo que entre lo que más le interesa conocer: nada como la biblioteca de la Universidad de Tulane que es en el extranjero, la más rica en libros y manuscritos sobre las aves. POCO a poco van llegando los delegados al Congreso de Agricultura que va a inaugurarse en esta capital el lunes próximo. IGNACIO de la Torre y Fournelle ha sido nombrado para atender a los señores delegados. NOMBRAMIENTO que, unánimemente, ha sido bien recibido porque para recibir, atender y despedir, nadie como el ex Asistente del Protocolo en la Secretaría de Relaciones Exteriores. TENEMOS el gusto de anunciar que entre esos delegados se encuentra el hombre que más se habla sobre los aguacates. WILSON Popenoe se llama ese hombre, que se ha dedicado a la siembra, cultivo y cosecha de los árboles que producen la mejor manzanilla vegetal. "HAY pocas frutas en la América Tropical que tengan tanto mérito intrínseco como el aguacate—dice Popenoe—al como también hay pocas que hayan sido tan descuidadas desde el punto de vista comercial." "CHINENE" es el sur de México, "coyá" y "shacé" en Guatemala, "vía" en Costa Rica, "palta" en Sudamérica. PERO lo que más le interesa a Popenoe es conocer personalmente al "Aguacate Padre", que está en Atlixco.

## Delegados de Honduras y Colombia a la Conferencia de Agricultura

Por el avión ordinario del sur, el "Guatemala Clipper" de la Pan American Airways, arribaron ayer a esta Capital los señores Ignacio Argucia y Luis Murillo, delegados, el primero de Honduras y el segundo de Colombia, al Congreso Interamericano de Agricultura que tendrá lugar en el Castillo de Chapultepec del 6 al 16 del actual.

Fueron recibidos cordialmente en el campo aéreo, por dos representantes de la Secretaría de Relaciones Exteriores, mostrándose satisfechos de visitar México con la comisión que trae. El señor Argucia ocupó en Tegucigalpa un importante puesto en el Ministerio de Fomento, y el señor Murillo es un destacado agrónomo.

Ambos funcionarios estiman que en la conferencia próxima a inaugurarse, se tomarán importantes medidas, con la tendencia de contrarrestar cualquier crisis de carácter económico en el período de post-guerra.

## Viene a México el Secretario de Agricultura Wickard

COLLEGE STATION, Tex. 3 de julio.—El Secretario de Agricultura, Mr. Claude Wickard, que se dirige a la ciudad de México para tomar parte en la II Conferencia Interamericana de Agricultura, se detuvo en esta población para pronunciar un discurso, ya anunciando de antemano, recomendando la internacionalización, por todos los medios, de la producción agrícola. Mr. Wickard fué saludado, al llegar, con discursos cationicos y le dieron la bienvenida las autoridades civiles y una escolta de caballería.

# Cosmópolis

Flores y Frutos      Tres Periodistas      Desea un Bálsamo  
Pabecco Herrarte.      Tiene una Idea      Negó su Ayuda

Por el LICENCIADO VIDRIERA

ANTES de todo deseamos que la Segunda Conferencia Interamericana de Agricultura que hoy por la mañana inaugurará sus labores en el Castillo de Chapultepec, tenga todo el éxito floral y frutal que se merece. SEGUROMENTE que el noventa y nueve por ciento de los delegados ignora que el gobernante de México que construyó ese castillo fue uno de los más entusiastas partidarios de toda clase de cultivos. CUENTAN papeles viejos que el Virrey don Bernardo de Galvez se asomaba a las ventanas del castillo, con visible inquietud, cada vez que se retrasaba en el Bajío la estación de lluvias. OPORTUNIDAD espléndida es ésta para que el Bosque de Chapultepec sea barrido y podado convenientemente. TORQUE el abandono en que ha estado en los últimos días ha sido tanto, que los papeles sucios y los árboles abandonados casi no han permitido admirar el bosque. TAMPOCO se nos ha permitido que manejemos, personalmente, nuestra admiración al delegado que más sabe de cultivos de árboles frutales. SEQUESTRADO lo han tenido hasta las telefonistas del hotel, al sabio horticultor norteamericano doctor William Popenoe. ANQUE es un verdadero sabio en polinizaciónes, hibridaciones, injertos y abonos, trae la representación oficial de una de las repúblicas centroamericanas en donde la guayaba y el mango son los peores enemigos del hombre. DEBEMOS lamentar—sin que nos sintamos Jerosimas—que entre las delegaciones centroamericanas no figure ninguna de los agrónomos que se han graduado en la Escuela de Agricultura de Chapingo. FIGURA entre los delegados norteamericanos un gran amigo de la Asociación de Aguateros Californianos. PROMETE que una ristra de Aguateros Californianos, a la huerta de don Alejandro Le Blanc, en Atlixco. BUERTA en la que todavía está prendida la lámpara que los aguateros le pasieron hace cuatro años, en testimonio de gratitud. PORQUE dentro de ella sigue en pie, alegre y culto a Dionisio, divinidad que entre los antiguos presidios las horracheras con que se celebraban las cosechas.

Hace  
24 HORAS

RECIBIO la debida publicidad el primer balance de las arduas labores desarrolladas por el Congreso de Agricultura; durante sus movidas sesiones, los delegados irrigan su técnica elocuencia con el equivalente de siete mil pesos de obras hidráulicas tales como el high-ball y la Cuba Libre.

El culto a Ceres, diosa de los granos de que se destila el alcohol, fué competentemente adiolonado, como se ve, por el culto a Dionisio, divinidad que entre los antiguos presidios las horracheras con que se celebraban las cosechas.

## EL EPIGRAMA DEL DIA

Por KIEN

Siete mil pesos se bebieron en Chapultepec los señores Delegados.

ULTIMAS NOTICIAS.

MILES de copas dizque se bebieron los Delegados de la Agricultura. Entretanto, gozando de frescura, los árboles del bosque se adherieron y "chocaron sus copas" en la altura.

## Con Millones de Parias no Debe Haber Producción Excesiva

### No Quiere Colombia que el Café o el Trigo Sirvan Para las Hogueras

Don Eduardo Mejía Vélez, director del Departamento Nacional de Agricultura de Colombia, ha declarado a EXCELSIOR que el acento en el habla del mexicano es tan colombiano o el de los colombianos tan mexicano que no ha logrado sentirse en un país extranjero.

—¿Y cuál es para usted el objeto primordial que persigieron los colombianos en la pasada Conferencia de Agricultura?

—Se puede decir que nosotros no perseguimos intereses locales. Venimos a tratar de resolver los problemas de la agricultura y de la economía agrícola en función de los seres humanos.

—Es posible resolverlos en otra forma?

—Por qué no? Se pueden resolver en relación con un monopolio, una política de poderío o de lo que sea.

—¿Y en función de los seres humanos?

—Esto quiere decir, sencillamente, que nosotros queremos que ya no vuelva a suceder lo que hace algunos años y que seguramente muchos recordarán, cuando se quemaron o se botaron al mar miles y miles de kilos de café para que no bajara el precio en el mercado.

—¿Qué se haría entonces con la producción excesiva en tales casos?

—Es que no puede haber producción excesiva. Con los millones de parias que hay en el mundo no es posible que hablemos de producción superior a la demanda.

### FALTA DE MEDIOS PARA LA DISTRIBUCION

—Pero el problema no es precisamente el de la demanda inferior a la producción, sino de la falta de medios adecuados para la distribución de lo que haya de "stock" en un momento dado.

—¿No lo cree usted, lo que pasa es que debe siempre predominar el beneficio colectivo sobre el de los particulares o de las corporaciones?

—¿Cuál cree usted que sería el remedio?

—Cuando ocurran los llamados casos de sobreproducción se debe tomar el producto por el Gobierno y distribuirse a un precio que permita al productor un mínimo de ganancia.

—¿Es usted partidario de la intervención del Gobierno en la producción?

—No precisamente, pero sí creo que la tendencia uniforme en el mundo actual es hacia algo pare-

Sr. EDUARDO MEJÍA VELEZ, Director del Departamento de Agricultura de Colombia.

—Lo que más sorprende, y gratamente, al platicar con usted, es el hecho de que hablamos el mismo idioma, la misma variación del castellano.

—Es porque los colombianos siempre nos hemos dedicado con fervor a las letras.

—¿Y lo cree? Desde "María" hasta "La Vorágine" ustedes han abierto brecha en las letras tropicales. —Con pena me enteré de la muerte del gran vate de los múltiples nombres que tanto amó al México que, por fin, le colmó la copa de "vino de Anáhuac".

### TAMBIEN ALLA COMEN TORTILLAS

—Es cierto que en Colombia también comen tortillas como nosotros.

—Es cierto, pero allá son un poco más gruesas y se llaman "arepas".

—¿Que le parecemos los mexicanos? No se detenga ante la crítica. Tenemos defectos y estamos acostumbrados a ellos.

—¿Pero usted, Sr. Director, los hemos querido, nada más "por una vez" que los mexicanos? —No, Sr. Director, pero sí he podido notar debido a la hospitalidad y el "savoir faire" que dispensan a los viajeros.

# Llegan más Delegados al C. de Agricultura

Ayer Arribaron los de Argentina y el Domingo los de E. Unidos

La llegada de la numerosa delegación de los Estados Unidos, a la Segunda Conferencia Interamericana de Agricultura, se anuncia para el próximo domingo, a primera hora de la mañana.

Encabeza la representación del país vecino, el señor Claudio A. Wickard, Secretario de aquel ramo en su patria, y los integrantes, son los siguientes:

Mr. Richard M. Klesberg, diputado por el Estado de Texas.—Eugene C. Auchter, Fr. D. Administración de Investigación Agrícola.—Departamento de Agricultura.—Albert C. Black, Fr. D. Gobernador, Administración de Crédito Agrícola.—Departamento de Agricultura.—John B. Hinson, Fr. D. Presidente, Corporación de Crédito sobre Artículos de Consumo.—Departamento de Agricultura.—Edwin Jackson Kyle, Dean, Escuela de Agricultura, Universidad de Texas, College Station, Texas.—James D. LeCron, Director de la División de Nutrición y Abastecimiento de Alimentos, Oficina del Coordinador de Asuntos Interamericanos.—Edward A. O'Neal, Presidente de la Federación de Agricultores Norteamericanos, 38 East Washington Street, Chicago, Illinois.—James G. Patton, Presidente de la Unión Nacional de Agricultores, 350 East Fort-sixth Avenue, Denver, Colorado.—Knowles Peverson, Dean Asistente, Colegio de Agricultura de la Universidad de California, Davis, California.—Jefe del Comité de Cooperación Interamericana de Educación Agrícola.—William Wesley Waymack, Litt. D., LL. D., Vicepresidente and Tribune, Des Moines, Iowa.—Leslie A. Wheeler, Director de la Oficina de Relaciones Exteriores Agrícolas, Departamento de Agricultura.—Milburn L. Wilson, D. Sc. Director de los Trabajos de Extensión Agrícola, Departamento de Agricultura.

### CONSEJEROS:

Lester De Witt Mallory, Agregado de Agricultura, Embajada de

*sigue en...*

los Estados Unidos, México, D. F.—Raleigh A. Gibson, Primer Secretario, Embajada de los Estados Unidos, México, D. F.—Ralph H. Allee, Jefe, División de Repúblicas Latinoamericanas, Oficina de Relaciones Agrícolas Exteriores, Departamento de Agricultura.

### SECRETARIOS:

Clarke L. Willard, Subjefe, División de Conferencias Internacionales, Departamento de Estado.—William K. Atshie, Tercer Secretario, Embajada de los Estados Unidos, México, D. F.—Phillip L. Green, Especialista en Asuntos Latinoamericanos, Oficina de Relaciones Agrícolas Exteriores, Departamento de Agricultura.

### AYER VINIERON OTROS DELEGADOS

Por la vía aérea arribaron ayer a la capital, otros delegados a la asamblea, que proceden de Argentina, San Salvador y Honduras.

El secretario general de la conferencia, señor Manuel J. Tello, y los respectivos representantes diplomáticos de esos tres países, señores doctor Juan G. Valenzuela, Hector Serrano Escobar y licenciado Edgardo Valenzuela, dieron la bienvenida a los viajeros, en cuanto bajaron del avión.

Vienen, por Argentina, el ingeniero Antonio Arenas; por El Salvador, el doctor Leopoldo Barrientos; y el señor Wilson Poponoe, por la república de Honduras; quienes a su llegada manifestaron que consideran de vital importancia para la economía de todo el Continente, la celebración de esta Segunda Conferencia Interamericana de Agricultura, que después de haber sido efectuada la primera hace varios años en Washington, ahora, por iniciativa del Primer Mandatario de la República Mexicana, general Manuel Ávila Camacho, se verificará en esta capital.

Seguramente hoy mismo, harán una visita de cortesía al ingeniero Marte R. Gómez, Secretario de Impresiones sobre los temas que expone cada uno de los delegados.

### LA DELEGACION DE CUBA VISITO AL ING. M. R. GOMEZ

El Ministro de Agricultura de Cuba, doctor Andres Rivero Agüero acompañado de los demás miembros de la delegación de su país, a la Segunda Conferencia Interamericana de aquel ramo, visitó a su colega, ingeniero Marte R. Gómez.

Los demás visitantes de este funcionario, fueron: el doctor Alfredo González Mañas, secretario de la delegación y abogado consultor; el doctor Ubaldo Valde, de educación rural, y redactor de "El País", de La Habana; el ingeniero José García Monter, director de Industrias, y ex Ministro de Agricultura, y señor Alberto Arrádonaga, experto en café.

Por uno de los miembros de la representación cubana, supimos que están por venir de su país, a unirse, los señores Arturo Mañas, representante de los Hacendados; Teodoro Santisteban, de los cultivadores de caña, y Eusebio Delma, Moncada, experto en monedas.

### DELEGADOS DE LA INDUSTRIA AZUCASERA

LA HABANA, Cuba, Julio 10. (AP).—A bordo del "Mexico Clipper" salieron hoy rumbo a México los delegados cubanos ante la Segunda Conferencia Interamericana de Agricultura que se celebrará en la capital de dicha República.

Sen los señores Arturo M. Mañas y Teodoro Santisteban.

Estos delegados representarán al Instituto Cubano de la Asociación Nacional de Hacendados y de la Asociación de Colonos de Cuba, respectivamente.

También viaja en este avión el Ministro de Educación de Haití, Maurice Dartigue, quien presidirá la delegación haitiana en la Conferencia Agrícola de México. El periodista cubano del staff del periódico "El País", Leandro García y las esposas de los señores Mañas y Santisteban tomaron parte en el "Mexico Clipper".

El resto de la delegación cubana, que será presidida por el Ministro de Agricultura, doctor Andrés Rivero Agüero, se encuentra ya en la ciudad de México.

# Llegan más Delegados al C. de Agricultura
