We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

About the Institute

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

My dear Sir

allow me to return you many thanks for the Cardamine, which Lewis ~~has~~ prevented from doing.

I find it will not be in my power to go with the good doctor to Ben Lovers: It is rather too soon to break off with the Parliament House, besides I shall be upon Ben Lovers for about a week in a month hence; and in addition I have not been out of doors ~~for this~~ since Friday evening on account of a cold, though I have no doubt but a walk would do me much good, yet I would not approve of a residence for a series of nights under a tent. I hope therefore you will bear my excuse.

Be so good as also to mention to D. Hooker that as soon as I receive
Hunt Institute for Botanical Documentation

finds time, that a correct drawing of
the peristome with 16 teeth of Hedwigii-
Schmidtii shall be sent him; he will
find the continuation of his white
membrane lying in the shape of teeth
in the inside of the operculum -
you may state Dr. Greville that
in consequence he must give out
plate of Gymnost, &c. again to Lizar
& get him to beat out the figure
of the capsule of that moss - Greville
may put in its place what other
he chooses -

Can you tell me if in the Flora
danica, where Hornemann has figured
Sph. chrysum *Wormskioldii*, if he
has given a description? I do not
think it different from *Sph. spha-*
-ricum -

If you meet with any good
mosses when with Hooker I should
be obliged to you for specimens, any
of my duplicate stock, if Greville
has not already satisfied you, you

are welcome to. Can you
Greville spare any duplicates of
Didymodon flexifolius?

Yours ever sincerely,
G. M. Smith
