The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized item.

*Usage guidelines*

We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

*About the Institute*

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

John Donnell Smith,  
1880.

A New Station for *Lilium Grayi*.

CLOSE upon Dr. Watson's recent prophecy in GARDEN AND FOREST, that the habitat of this Lily would prove to be not restricted to Roan Mountain and the Peaks of Otter, has followed its discovery by Mr. H. P. Kelsey in an old field on the banks of Linville River, not far from the little village of that name at the foot of Grandfather Mountain, N. C. The station must be very different from the two subalpine ones previously known. He sends half a dozen plants, collected July 1st, which are readily identified with those that grow under the Alders and Rhododendrons of the Roan Mountain, "Bald," and with Mr. Faxon's excellent figure in GARDEN AND FOREST.

Baltimore, Md.

John Donnell Smith.

Dec. 5, 1885.

Mr. John Donnell Smith,

Dear Sir: Your letter and the accompanying package of plants came duly to hand, - a most acceptable and very interesting "New Year Gift". Nearly every one of the plants were new to me. I think I have but three of the number in my herbarium. Sicyos angulatus is the only one that grows here. Many thanks indeed for these rare plants. I have greatly enjoyed studying them over.

I find I can spare you my Dayton specimens of Trapa Woodii out of my herbarium. I really have

two specimens though the first came from a neighbor's garden who had transplanted it from the woods. I send you the specimen I found along the Stillwater river at Ludlow Falls above the city.

I compared it with the *Senecio* <sup>*reluctantiflorus*</sup> ~~*parviflorus*~~ which you sent me and it seems that a much larger growth of the same plant. The specimen I send you seems to have much larger fruit than the specimens described by Watson in his "Revision of the Siliceae".

I send the package by express prepaid.

Very Respectfully Yours,  
A. P. Morgan.

Lurville, N. C., July 2 '88.

Prof. John Donnell Smith,  
Baltimore, Md.

Dear Sir, - I am up here on a short trip of a few weeks, after the heaviest spring work in our Nursery at Highlands is over. Am finding many interesting, to me, new plants. Among other things, a lily growing in an old field along the banks of the Lurville river, attracted my attention at first sight, while out riding a short distance. From its general appearance it immediately flashed through my mind, that it was probably *Lilium Grayi* (Watson). By comparing it with Chapman's description, my father & myself are quite satisfied it is the true *L. Grayi*.

By this mail I send you some flowers for identification. I believe it is said to grow only on the summit of Roan Mt. Hope you may be able to make a visit to this place

Sometime this Summer.

Yours Respectly -

H. P. Kelsey,

My address is, Highlands,  
Macon Co., N. C.

Highlands, July 23, '88,

Prof. John Donnell Smith -  
Dear Sir -

I was detain-  
ed ~~at~~ a week at Louisville  
& find your letter awaiting  
me here. I am very sorry  
the specimens did not  
reach you in good condition  
as I did not secure any  
flowers for pressing. They  
are entirely over flooding  
now. Next Summer I  
will try to collect some spec-  
imens for herbarium for  
you. I do not know the  
exact elevation of place  
where I found Lily, but it  
was about 2700 or 3800 ft.

It was not on Grandfather  
Mt. but in the Louisville valley

at the foot of Grandfather,  
about 5 mi. from same, &  
down the river. The specimens  
were growings in an old field,  
along with *Lilium superbum*.

The locality is in Mitchell  
Co. ~~at~~ 10 mi. from ~~C. Berry~~  
and 2 mi. from Linville.

It also grows down  
the river in like localities  
about 8 mi. from where I  
first found it. —

I will send you a  
copy of my new price list  
when printed - about 4 or  
6 weeks.

Yours Respectly,

H. P. Kelsey,  
Highlands,  
Macon Co. N.C.

Capt. - John Downell Smith  
Baltimore,  
Md.

Dear Mr. Smith:

Permit me

to call your attention to

your no. 6226, collected at-

Las Vixas, Dept. - Santa Rosa,

Guatemala, Sept. - 1893, and

distributed as Microtia

debilis, Sw.

The plant -  
seems to me to be better

referred to ballisia umbellulata;

Ham.

Of course it is possible  
that a confusion may

Bronx Park,  
New York City.

January 27th, 1906.

Captain John Donnell Smith  
505 Park Avenue,  
Baltimore, Md.

My dear Captain:-

I thank you most sincerely for the package of plates mentioned in your letter of the 27th instant, and for your thoughtfulness in sending them to us; they will be very useful.

Enclosed please find two prints from a negative of one of the three plants of Dracaena Americana, which were raised from seed brought back from Honduras by Mr. Percy Wilson. The plants are now between three and four feet high and are an attractive feature in the Dracaena group here. If you would like additional prints, I will be glad to send them.

Yours faithfully,

*N. L. Britton,*  
Director-in-Chief.

505 PARK AVENUE,  
BALTIMORE, MD.

12 Dec. 1907.

Prof. W. A. Hellerman,  
Columbus, O.

Dear Sir:

My study of the  
plants last sent me by you has been  
interrupted by a severe cold that  
has made it necessary to drop all  
work.

I enclose a list of such as I had  
fully determined, and generic  
names for the others. In order  
to name in full these latter, I  
should have to pass some hours  
in my Garrett herbarium,  
where it is deathly cold. I

shall have to ask for some time permitting this work.

Yours truly,  
John Samuel Smith

 (not written in book)

505 PARK AVENUE.

BALTIMORE, MD.

2 April, 1909.

My dear Dr. Rose:

My estimate of  
the number of sheets of the forms  
was not so far wrong. I am  
glad to know they are now  
where they will be taken good  
care of, and will be of use.

I esteem it a great good  
fortune, that they will be  
the object of Mr. Maxon's  
studies.

The boxes came this after-  
-noon.

My brother-in-law, W. Blair

is now critically ill; and I  
am in daily expectation of  
being called to Richmond.

It is possible, therefore, that I  
may be absent when you come  
to Baltimore next Wednesday.

But should that be the case,

Mr. von Kaff will have

great pleasure in a visit  
by yourself and Mr. Rose.

Yours very truly,

John Samuel Smith
