The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized item.

*Usage guidelines*

We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

*About the Institute*

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

The leaves, Asarabacca an smooth, of a deep  
 green colour, much broader, and tenderer than  
 those of Ivy, and not cornered at all, not unlike  
 roots, but under the leaves, stand upon slender foot-stalks,  
 of an ill-favour'd purple colour, like the flowers and  
 buds of Henbane, in case, wherein an contain small  
 seeds, covered, somewhat rart: the wet are very  
 small & slender, gray as they are, the upper crest of  
 earth, are folded within another, of an unpleasant  
 taste, but a more sweet & pleasing smell, being with all  
 a kind of bit's quality.

Patauii. Apud Paulum Meiectum.  
Ex Typographia Laurentii Pasquati. 1606

p 79  
Capitulum LVIII  
Hortos Hyemales Confricandi ratio

Verum laudandus <sup>in a h. h. d. g. m.</sup> magis is est labor, qui  
ad Hortos hyemales Confricandos suscipitur.  
Inimoz. n. atq; utitur. Diippe plura, quam  
in picturis monstrantur quae ad formam spectant,  
nempe color, aliquid; nonnulla, ferre tam  
exacte non possunt priore modo de pingi.  
Practerea <sup>causa</sup> prius labor in Plantis grandibus, asperis,  
et spinosa ac valde duris saepe frustra sit. Modus  
autem chartis Stipes affluti <sup>inandi</sup> talis est. <sup>sic</sup> Planta  
quam vultis, aut eius ramus viridis cum flore,  
foliis, atq; semine, si haberi potest, perfertur; sic  
Planta in charta candida duo folia ponantur.  
Nam ignobilis charta, et quae perfluit quoniam  
ab omnibus tractetur recipitur ad hunc usum,  
nequaquam <sup>in no. v. m.</sup> apta censetur, quod experientia à me  
probatum est, inter hanc positas Stipes difficulter  
succari, saepèq; atq; et squallere debitas  
marcescere. Ponenda autem ea quae dixi folia  
in crasso, et plurimum paginarum libro, qui

in aceti acerum unciis sex maceratur per  
 noctem; deinde igni apponitur lento, ut  
 liquefiat. Amoto ab igne ubi pallulum  
 refrigeravit, adduntur aloes hepaticae, Drachma  
 semis, pulvis Sanguiphylorum scrupulus unus;  
 miscentur. Plantam igitur agglutinandam  
 chartae ignobiliori <sup>longius</sup> superstermite, ac glutine  
 oblinite, deinde <sup>lift up</sup> auferte, chartaeq; <sup>hardness</sup> candidae  
 imponite, et alio <sup>superposito</sup> folio sudario,  
 aut <sup>lino</sup> linteo fortiter <sup>ficite</sup> et aequaliter,  
 ut <sup>undiq;</sup> chartae adhaereat; tum ipsam  
 inter <sup>ovisatras</sup> duo folia, alio libro concludite <sup>superincumbente</sup>  
 bono pondere, donec siccata <sup>litem</sup> (quod pasci  
 unam, aut alteram sui horam) <sup>mor</sup> auferte, auferte  
 Siquidem autem et illud hec est, non cum  
 manibus <sup>strepibus</sup> sic gendum esse. Nam quaedam  
~~sunt~~ sunt, quae facile siccant, nequeunt, propter  
 succi aquosi ubertatem, ut Sempervivum,  
 Telephium, et aliorum quo ~~radant~~ genera. Etenim  
 marcescunt, putrefiunt, perduntq; folia, aut  
 ea alterius coloris, quam naturae erat,  
 valdeq; corrupta servant. Has igitur <sup>virides</sup>  
 agglutinare satius est; prius tamen inter  
 duo folia strata in librum ponere, comprimereq;  
 leviter levi pondere, donec flaccescant plicari,  
 formamq; ~~sumper~~ sumpserint, ut recte  
 agglutinari possint. Hoc modo et alias quoq;  
 vires in montibus agglutinari, soliq; aut alio  
 loco ~~calido~~ calido exposui, ut sic essicarentur,  
 felicitatq; <sup>successu</sup> huius labor

respondet magnitudini foliorum imponendum.  
 Libro huic superponatur pondus, quo tanquam  
 coraculare paulatim <sup>pressio</sup> <sup>plantae</sup> Planta comprimatur.  
 Cavendum autem est ab ingenti pondere,  
 prius quam Plantae magna <sup>aqueosioris</sup>  
 humores pars consumpta sit. Ideo paulatim

aggravandum pondus, primum; <sup>donec</sup> <sup>flarescant</sup> Plantae; (quod aestatis  
 tempore trium, aut quatuor horarum spatio  
 evenire solet) et postea gravius, tandem gravissimum  
 ubi parum humoris adhuc in se habuerunt,  
 ac iam ferè siccae fuerint. Illud etiam

debet, ut singulis diebus eas  
 inspicatis ac revolvatis, et folia <sup>si quas</sup>  
 videritis expletis, floresq; et chartam, si quas  
 ut ab utroq; lateri aspici possunt chartamq;  
 mutetis donec prorsus sicca evaserit.

Sicca erit loco sicco Conservanda inter chartam,  
 donec plurima sis exsiccata sine operaeq;  
 pretium fuerit agglutinandi laborem suscipere.

Tum si ejus Pericilla variae magnitudinis  
 (Plantae enim magnis foliis praeditae majora  
 desiderant, parvis minoras) <sup>imbuetis</sup> hoc  
 glutine infasciatis, quo <sup>obinetur</sup> eam Plantae  
 faciem quae chartae adhaerere debet. Compositur  
 hoc glutin ex taurocolthae pellucidae, quam  
 coltham Tedescham, hoc est glutin germanicum  
 cum vulgaris Patavii vocat, uncia una; quae

Best armyng reyn<sup>r</sup> worshipfull, home into  
Englaunde and Spaine, & now not pressed  
into the former toles of my old trade. I to  
passe the tyme to some benefite of my  
Countrie, & to avoide idleness: booke in hande  
& translate out of Spanishe into Englishe, the  
three bookes of Doctor Monardes of Seville,  
the learned Phisitian, treating of the singular  
& rare vertues of certayne Herbes, Trees, Oyls,  
Plantes, Stones, & Dyriges of the West-Indias,  
for tyme the same booke is of high commendation  
in Spaine, & other countreys

As since the foresaid Medicines  
mentioned in the same booke of Doctor  
Monardes, are now by Marchauntes & others,  
brought out of the West Indies into Spaine,  
from Spaine hether into Englaunde, by such as  
dooeth daily trafficke together

Johnson p 1191 esp of the  
Coronopus ex Codice Caesares

"The figure which Dodmaeus hath set forth  
out of an old Manuscript in the Emperors  
Library, being there figured of Coronopus, seems  
to be of the Law described [ Trifolium corniculatum,  
or Melilotus Coronata of Label : Lotus  
perulophyllus of Jernea ] or some plant very  
like thereto, though the five leaves at each joint  
be not just in such order as they should be, yet all  
the parts are well expressed, according to the drawing  
of those times, for you shall finde few ancient  
expressions come so neere as  
this dothe."

(I am surprised at this, as I think the  
fall of Constantinople was the end. A. A.)

(For the beginning is supposed to be the death of Domitian,  
or Chastelaigne have at different times  
been treated as the beginning)

Hatter mentions Libanus & Jacques le Mayne's 61  
blocks of figures - 5 plates pass & Crispin de  
Pose's Haters Florides. He considers these an out  
by the same hand as the first part. "But some of them  
had a common origin there can be no doubt."

p 480  
The list of plates pass & Crispin de Pose  
was done down for Drang & Jacques de  
Mayne

p VII  
The period of five drangs deal before  
botanical science arose in anything like its  
present form.

~~Leaf~~ of 'Oval' Pers. Thapsus Address was  
 de of 'Oval' Pers. Thapsus Address was  
 London, 1871.  
 It was printed by Thomas Purfoot, London, 1871.  
 The same work, in the very same impression, was  
 issued ~ 1878 by Bentley & Plantin & Amberg  
 along with another work, I think. This has had some  
 authors & more than the original was printed at the  
 Plantin press, than Purfoot's original was - false  
 pretence. But the archives, the Plantin Museum  
 in Antwerp show that Plantin bought eight hundred  
 copies of Purfoot's impression (in the word 'books'),  
 issued them to the Address of the 'Journal' of  
 Cologne. The Address of the 'Journal' of  
 Cologne printed - 7 to London press.

L'ouverture du jardin royal de Paris, pour la Demonstration  
des Plantes Medecinales. Guy de la Brosse. Paris, Jacques  
Dagart, rue de la Bouclerie, 1640.

X

Digitized by Hunt Institute for Botanical Documentation

Guy de la Brosse was the founder of the Jardin des Plantes  
in Paris, and we possess the regulations which he laid down  
in 1640 for the admittance of students to the demonstrations on  
medicinal plants. They are mostly fairly commonplace - the  
students mustn't pick the flowers or trample on the borders and  
each man must provide himself <sup>with</sup> tablets to write upon. <sup>to</sup> But  
there is one which says that no student must enter "avec longue  
vesture". I was puzzled by this until it occurred to me that  
no doubt the reason for forbidding the students to wear long  
garments ~~was to~~ prevent the concealment of weapons. The medical  
students of the Latin Quarter in the 17th century ~~were~~ <sup>must have</sup>  
~~probably~~ <sup>been</sup> a tolerably lively set, and I fancy poor Guy de la  
Brosse was shiveringly nervous <sup>lest they should indulge in</sup> ~~about their~~ brawling among  
his flower beds; this idea is borne out by another regulation,  
which states that the students are to employ their eyes and <sup>their</sup> ears,  
but they are strictly forbidden to use their hands for any  
purpose ~~other than~~ <sup>for</sup> writing.

Culpeper (1532)

Barbery p 5

Mars owns the shrub...

"The hair washed with the lye made of the ashes of the tree and water, will make it turn yellow, viz. of Mars, his own colour. The fruit of the shrub, the flowers of Broom + of Heath or Fungus, cleanse the body of cholera by sympathy as the flowers, leaves + bark of the Pearle tree do by antipathy, because these are under Mars & the Pearle under Venus."

p 62

Mushrooms are under the dominion of Saturn & if any are poisoned by eating them, Wormwood is a herb of Mars cures them, because Mars is exalted in Capricorn, the House of Saturn, this is done by sympathy.
