The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized version of an item from our Library.

Usage guidelines

To the best of our knowledge, this item is in the public domain. We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

About the Institute

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

Number 217,
(Price THREE SHILLINGS)
To be continued MONTHLY, of
CURTIS'S
BOTANICAL MAGAZINE;
OR,
Flower-Garden Displayed :

IN WHICH
The most Ornamental FOREIGN PLANTS, cultivated in
the Open Ground, the Green-House, and the Stove,
are accurately represented in their natural Colours.

TO WHICH ARE ADDED,
Their Names, Clafs, Order, Generic and Specific Characters,
according to the celebrated LINNÆUS; their Places of
Growth, and Times of Flowering:

Together with the most approved Methods of CULTURE.

A W O R K

Intended for the Use of such LADIES, GENTLEMEN, and GARDENERS, as
wish to become scientifically acquainted with the Plants they cultivate.

Continued by *JOHN SIMS*, M. D.

FELLOW OF THE LINNEAN SOCIETY.

L O N D O N :

near the Obelisk, *St. George's-Fields.*

Also, by all Booksellers, Stationers, and News-Carriers,
in Town and Country.

*New and valuable Books published by THOMAS OSTELL, No. 3,
Ave-Maria-Lane, Ludgate-Street, London.*

A SYNOPSIS of the BRITISH FUCI, by DAWSON TURNER, A. M. Member of the Imperial Academy, Naturæ Curiosorum, of the Linnean Society of London, and of the Physical Society of Göttingen. In Two Volumes small 8vo. neatly printed, Price 8s. 6d. sewed.

“ The Author of these Volumes has rendered an essential Service to the Public, by exhibiting in a commodious and distinct Form all that is at present known concerning the British Fuci; this Knowledge, however limited, lay scattered in large and costly Publications; the Transactions of learned Societies, in Gmelin’s *Historia Læcorum*, Gunner’s *Flora Norvegica*, the *Flora Danica*, &c. but especially in the recent and splendid Delineations of Stackhouse, Velley, and Esper. We cannot close this Article without observing, that Mr. Turner’s very intimate Acquaintance with this Subject, his Diligence and Patience of Research, his happy Talent for nice Discrimination, and a Degree of Candour which has been rarely equalled (never, we believe, surpassed in any Piece of systematic Writing) lead us to form the highest Expectations of the more extensive Works on which he is engaged.”

Monthly Review, Sept. 1800.

OBSERVATIONS CHIEFLY LITHOLOGICAL, made in a Five Week’s Tour to the principal Lakes in Westmoreland and Cumberland. In One Volume 8vo. Price 3s. sewed.

“ The Author has contrived to convey in this short Sketch a good Deal of Entertainment and some Instruction. His chief Attention was directed to the Examination of the Minerals and Fossils that came in his Way in the Course of his Journey, and we have here some pertinent and just Observations upon them, particularly on *Granite* and *Jade*.”

Literary Journal, August.

“ He is well acquainted with Natural History, and has pursued the Works of Nature in other Countries besides Great-Britain; but he had little Time to spend in each Place, so that his Remarks are short, rapid, and miscellaneous. His Observations on *Jade* and on *Granite* shew him to be well acquainted with the Subject of Mineralogy; and his Description of the Contents of the principal Mountains, from Mr. Hutton, of Kewick, contains some excellent Hints for future mineralogical Travellers.”

Critical Review, August.

METEOROLOGICAL OBSERVATIONS and ESSAYS, by JOHN DALTON, Professor of Mathematics and Natural Philosophy, at the New College, Manchester. In One Volume 8vo. very closely printed, containing upwards of Two Hundred Pages, Price 5s. in Boards.

“ Est quoddam prodire tenus, si non datur ultra.” *Horace.*

This Day is published, in One large Volume 8vo. embellished with Twenty-Five new Plates, accurately drawn by EDWARDS, and engraved by SANSON, Price £ 1 1s. in Boards, or £ 1 15s. with the Plates beautifully coloured, by WM. GRAVES,

A BOTANICAL DICTIONARY, or Elements of Systematic and Philosphical Botany, by COLIN MILNE, LL.D. Author of the Institutes of Botany, and Habitations of English Plants; Third Edition, revised, corrected, and very considerably enlarged.

This Dictionary has long been the Admiration of Europe, and is quoted as of the first Authority by all the most eminent Writers both in this Country and Abroad, and is recommended by the most eminent Teachers of Botany, as containing an excellent Fund of Botanical Instruction necessary to be known by every Person who is cultivating so pleasing and useful a Science.—Our late eminent Botanist, W. Curtis, always looked up to this Work as his grand Desideratum in all Cases of Reference, and Dr. Thornton as a Text Book, in his Lectures on Botany.

CURTIS’S PRACTICAL OBSERVATIONS ON BRITISH GRASSES, with Coloured Plates, Third Edition, Price 5s.

London: Printed for H. D. Symonds, No. 20, Paternoster-Row, and sold by Faulder, Bond-Street, and G. Graves, at the Botanical Magazine Warehouse, Crescent, St. George’s-Fields, where all the above Publications may be had.

Printed by S. Couchman, Throgmorton-Street, London.
