About the Institute

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

CURTIS ON SURDITAS.

This Day is Published, the Second Edition, considerably enlarged and improved, Price 7s. 6d. Boards.

A TREATISE on the **PHYSIOLOGY** and **DISEASES** of the **EAR**; containing a comparative View of its Structure and Functions, and of its various Diseases,

By **J. H. CURTIS**, Esq.

Aurist to His Royal Highness the Prince Regent, His Royal Highness the Duke of Kent, and to their Royal Highnesses the Duke and Duchess of Gloucester; Surgeon to the Royal Dispensary for Diseases of the Ear, Lecturer on the Anatomy, Physiology, and Pathology of the Ear, Fellow of the Medical Society of London, &c. &c.

Printed for the Author, No. 2, Soho-Square, and Sold by Callow, Princes-Street, Soho; Cox and Son, St. Thomas's-Street; Hightley and Son, 1, and G. Underwood, Fleet-Street; Auderson and Chase, West Smithfield; Burgess and Hill, Great Windmill-Street; Fearman, 170, New Bond-Street; Black, Edinburgh; and Hodges and M'Arthur, Dublin.

"The Diseases of the Ear are more intricate than those of any other organ of sense; every thing, therefore, new on the subject has a claim to attention, particularly when it is written with a laudable view of imparting information to deaf persons. We agree with the Author, that an attention to one branch must acquire a facility of discrimination and a nicety of treatment. The Author of this work, besides his other useful information, has described various ingenious mechanical contrivances for assisting hearing, many of which are entirely new in this country."—*Antijacobin Review*, November 1817.
