About the Institute

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

BY B. MAUND.

*The following commendations of this work are extracted from
the Critical Gazette and Literary Chronicle.*

"We introduce this publication to the notice of such of our readers as are hitherto unacquainted with its merits with infinite satisfaction. The object is to combine useful information with the nicest botanical accuracy, at the least possible price, and we think the author has completely fulfilled his intentions. The plates vie in spirit of execution and accuracy of delineation with many of the best productions of the pencil of Sowerby, and the directions for the cultivation and general history of the plants are written in a clear and concise style."

Crit. Gaz. June, 1825.

"Four numbers of this elegant work have already appeared, and, if we may judge from the specimens they furnish, we think we may promise that it will be a great treat to all lovers of the choicest productions of nature, or admirers of that enchanting and instructive science, botany. The work is not only scientific, but is very readable, and even useful to those who may not make botany a study."

Lit. Chron. May, 1825.

The first twelve numbers, with title and index, neatly boarded, will be ready on the first of January, and may be had of all Booksellers, large paper, 18s. small 12s.
