Web site: www.huntbotanical.org

The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized item.

Usage guidelines

We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

Statement on harmful and offensive content

The Hunt Institute Archives contains hundreds of thousands of pages of historical content, writing and images, created by thousands of individuals connected to the botanical sciences. Due to the wide range of time and social context in which these materials were created, some of the collections contain material that reflect outdated, biased, offensive and possibly violent views, opinions and actions. The Hunt Institute for Botanical Documentation does not endorse the views expressed in these materials, which are inconsistent with our dedication to creating an inclusive, accessible and anti-discriminatory research environment. Archival records are historical documents, and the Hunt Institute keeps such records unaltered to maintain their integrity and to foster accountability for the actions and views of the collections' creators.

Many of the historical collections in the Hunt Institute Archives contain personal correspondence, notes, recollections and opinions, which may contain language, ideas or stereotypes that are offensive or harmful to others. These collections are maintained as records of the individuals involved and do not reflect the views or values of the Hunt Institute for Botanical Documentation or those of Carnegie Mellon University.

About the Institute

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

Dear Gil,

Will you mail out the reprints in the attached list ?
Maybe you could get one of the Departmental secretaries to do
the addressing and mailing for you. But you will have to pull
the reprints out of the files where we have them. Most of the
requests are for the Manihot esculenta monograph which came out
in Economic Botany. Those reprints are (as I recall) in a
separate file cabinet from the other reprints, and were, when I
left in one of those files next to the supply cabinet in my office.

Looking forward to seeing you and Jim on or about the 23rd.
Ask Buchanan to send me a cable as soon as you know your actual
flight number, date and time.

Sincerely,

D.J. Rogers

Dr. D.J. Rogers,
University of Colorado,
Boulder Colorado,
U.S.A.

Dear Dr. Rogers,

I would appreciate very much a copy of the paper by yourself and S.G. Appen, on genetic resources for cassava improvement. The reference to your paper in plant breeding abstracts would indicate that this was a publication of the University of Colorado and I regret I have no further information except that it is pages 72 - 75.

We at the University of Queensland have begun some studies on cassava and are looking to the possibility for further development in this crop. I realise that you have been working with cassava for a long time and would appreciate other reprints on subject if you could spare these.

I might say that I was on sabbatic leave at the University of California at Davis in 1972 and there met Dr. Don Hervey who is at Fort Collins. I presume you may know Dr. Hervey.

With best wishes and thanks.

Yours sincerely,

E.J. Britten,
Professor of Agriculture.

Dear Dr Rogers,

This is to thank you for so kindly sending me the separate of your paper on a Computer Programme for Classifying Plants II. I saw and was most interested by your earlier paper with Tanimoto in Science. I hope that we may find it possible to use a technique of this sort for the classification of crop habitats.

sincerely,

Erna Bennett,

Chicago, Illinois 60637

Dear Dr. Bruck,

I am sorry to say that we are completely out of our science reprints. Other papers of interest are in press, but have not yet made the scene. If I could get your assistance to press the editor of Systematic Zoology to get him to publish a paper of ours a little sooner; the ~~best~~ ^{most} thing we have done so far, and to me the most useful, is a Graph Theory Model described in a paper submitted to SSZ. We have word that this paper will not be published before September of 1966.

Dear Dave:

Would appreciate receiving a
reprint of your paper on
yuca that appeared in

Econ Bot 19(4):369-77

Am presently working on third
edition of "Produccion de
Hortalizas" and would also
be grateful for other copies
of your papers.

Do you have one on your ideas
that yuca could have originated
in Yucatan? Clark interviewed
you and wrote up your studies
when he or you were in the NY
Bot. Garden.

I devote some time to teaching
Hort and advising in curriculum
development and also get back
into the tropics every year. It
is very interesting here.

Best regards

Ernesto

Dear Dr. Elithorn:

I am sorry to have delayed such an inordinately long time in sending reprints of papers you requested. I trust that it is not too late to be beneficial. I am sending under separate cover several papers which I feel are useful. Two of these papers are pre-prints of papers accepted for publication and should appear shortly. I shall keep you on my mailing list for papers now in the works.

Sincerely yours,

David J. Rogers
Professor of Botany

Dear Professor Rogers,

Thank you very much for your letter and the enclosed reprint.

I am sorry to hear that Dr. Tanimoto is no longer interested in this field but am much encouraged that you are developing these programmes currently in your Department.

I am at the moment writing a review of classification procedures as they apply to medicine and psychology. If, therefore, it is possible to see pre-publication drafts of your new programmes, I would greatly appreciate it and would, of course, return the texts to you if you so wished.

Yours sincerely,

Alick Elithorn
Member External Staff, M.R.C.

Dear Dr. Rogers,

I am currently carrying out a taximetric study of Euphorbia subgenus Agaloma using graph theory techniques, in order to properly delimit the sections prior to a monographic study of one of the section, Tithymalopsis.

I would therefore appreciate receiving a reprint of your monograph of Manihot which appeared in the Flora Neotropica series and any other papers of yours concerning this method (except the Cassia sect. Apoucouita paper, which I have already received from Dr. Irwin).

I am planning to present the results of my study at the AIBS meeting this summer.

Thank-you, very much.
