The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized item.

Usage guidelines

We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

Statement on harmful and offensive content

The Hunt Institute Archives contains hundreds of thousands of pages of historical content, writing and images, created by thousands of individuals connected to the botanical sciences. Due to the wide range of time and social context in which these materials were created, some of the collections contain material that reflect outdated, biased, offensive and possibly violent views, opinions and actions. The Hunt Institute for Botanical Documentation does not endorse the views expressed in these materials, which are inconsistent with our dedication to creating an inclusive, accessible and anti-discriminatory research environment. Archival records are historical documents, and the Hunt Institute keeps such records unaltered to maintain their integrity and to foster accountability for the actions and views of the collections' creators.

Many of the historical collections in the Hunt Institute Archives contain personal correspondence, notes, recollections and opinions, which may contain language, ideas or stereotypes that are offensive or harmful to others. These collections are maintained as records of the individuals involved and do not reflect the views or values of the Hunt Institute for Botanical Documentation or those of Carnegie Mellon University.

About the Institute

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

Dear Bernie,

I believe I want a card to you not long ago with a little news, but it must have been a couple of weeks ago.

I imagine you are quite satisfied in being in that part of the country. It has been very cold here for this time of the year.

Rayon knows, Kathryn has some trouble and this weather doesn't help her at all. We would like to get into a warmer climate if possible when we leave here.

Try to drop me a line and let me know what sort of a set-up you have.

iology. I'm wondering if you would do me a special favor. I have Porter on the board and I feel that it would be wise to collect a few exams from different sources. Could you send me yours from Diag. Bact.? Jones + Kallio submit questions and I just don't know what to expect from Jones. I would appreciate it very much if you would forward any you may have, or information about questions you had in that course.

My hearing has taken a turn for the worse. I now wear an "aid" in classroom in order to catch what is going on. A war injury and what a handicap.

Well, I must "scram" to another class (Org. Chem.) so I'll be signing off. Would appreciate leaving from you. Sincerely,
B. Gil
P.S. Give my regards to your wife Wendell

I have a job lined up in Puerto Rico (U. D. A.) if I want to take it. Salary is excellent but I just don't know much about living conditions, etc. For a single fellow it might not be so bad.

Bulat now has Sam's old job. Weldon has mine since I succeeded in getting a fellowship.

Carroll and Riley will be going up for exams next week. After the Weber episode caution seems to be a favorite word around here. Weber is trying for a job around the middle West.

I'll be taking my exams in a few weeks with a minor in bacter-

Louisiana State University
University Station
Baton Rouge, Louisiana

Dear Dr. Chilton:

I am currently trying to finish up a manuscript on a Manual of North American Smut Fungi and am perturbed by the fact that I have not had access to smut collections from some of the southern states as I have from the west, north, and east.

Would you be willing to send me on loan the smut collections in your herbarium? We should be glad to pay transportation both ways on this material. Also we should be glad to comply with any rules and regulations that you may have pertaining to such loans.

Sincerely yours,

George W. Fischer

(Department of Plant Pathology)

November 7, 1955

Dr. Bernard Lowy
Department of Botany and Plant Pathology
Louisiana State University
Baton Rouge, Louisiana

Dear Dr. Lowy:

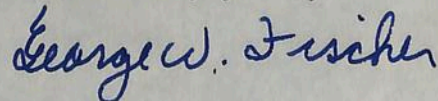

On behalf of the Membership Committee, of which the vice-president is automatically chairman, and acting on your nomination for membership by Dr. H. E. Wheeler, I take great pleasure in extending to you a cordial invitation to become a member of the American Phytopathological Society.

The American Phytopathological Society was organized in 1908. From its original 130 Charter Members who founded the Society, its membership has gradually risen to the present level of over 1700. These are scattered throughout all the 48 states and the two territories, seven of the Canadian provinces, and 46 foreign countries. Our journal PHYTOPATHOLOGY has world-wide coverage, and commands international reputation for the excellence of its contributions.

The objectives of the Society are "to promote: (1) the increase and diffusion of all aspects of knowledge relating to plant diseases and their control, (2) effective working relations between persons professionally engaged in this field of study, and (3) coordination of various interests and services pertinent thereto".

The several classes of membership and the pertinent dues are described in the enclosed reprintings from the Constitution. We should be pleased to have you become a member in whichever category you best fit. Simply mail the completed application form and the appropriate dues to the treasurer, Dr. Saul Rich, Connecticut Agricultural Experiment Station, P. O. Box 1106, New Haven 4, Conn. Your membership will begin as of January 1, 1956.

Very sincerely yours,

George W. Fischer

7th July, 1954

Dear Myco, Sara and 2-Anne -

Your good

letter with the Red Eva was here on our return from "foreign travel" in Canada, but it has taken me two days to give the algae some preliminary pigeon-holes. We returned the night of the 4th, making the trip from the border town of Calais, Maine that day. It was fun, and I managed to find enough algae to keep me interested in them. However, the schedule followed did not leave me any opportunity to extend into fungi, mosses, and others. The preceding week, however, I did pick up a bit of sociology in

relation to mosses, while on the VT.
Botanical Club foray, from a biology
prof at a Massachusetts school. He got
inspired by "Mosses with a Hand lens" to
visit Newfane, VT. and call on the author.
At the post-office he was informed that
Mr. Grout sold appliances, insurance, etc.
etc. - but this proved to be the author's
brother. As to the author he was told
"O, him? He don't do nothin'". At last
the author was located on a cot in a
garage back of his house, which he had
rented, with the usual hermit surroundings
and in apparent poverty. Thus if you
devote yourself to plants exclusively you
not only "do nothin'", but end up alone,
sucking a bone. Or you may. The days
here go by pleasantly: I go after algae,
study them, and go after some more. Thank
you for Eva, and best wishes. Sincerely,
S.W.S.

April 18, 1956

Dear Bernie

Received package containing *Lophium* specimens
this morning. Thanks lots! Haven't found as good
material as yet on the saks around here. Am including
the photo that I promised. As you can see

Mr. Ampey caught everything in that shot.
I have heard via airwaves that rain is fore-
cast for the morrow. If its sufficient to
provide good collecting perhaps we might be
able to do a little field tripping Saturday.

Numbers required

"FREE"

P.S. A student of mine who is doing a paper on phylogeny in the
fungi asked about the bibliography that you indicated that you had.
If its convenient could you send a copy. He has several listed but
probably has overlooked others.

Febrero 17 de 1958

Muy queridos amigos Sarita y
Bernard:

Por fin, en este lunes de Carnaval, he quedado tranquilo en casa, después de dejar toda la familia veraneando en San Pedro de Colapas (de que tanto les hablaba Elba) y puedo dedicarme a escribir a los tan recordados amigos que tanto contribuyeron a hacerme agradable nuestra estadía en L. S. U.

¿Cómo están Ustedes? Por la fotografía última de Maxim y Boris se ve que están cada vez más lindos y se mantienen sanos y fuertes.

Esperamos recibir pronto la gran noticia del viaje a la Argentina y particularmente a Eucumán. Si Bernard estuviera ya aquí, se sentiría en el paraíso pues este verano está siendo muy lluvioso y los

bosques y campos están setreados de sus queridos hongos.

Yo, desde que llegué a Tucumán, estoy agobiado de trabajos a lo que se han ido agregando problemas más o menos absorbentes. Inmediatamente tuve que reincorporarme a mis dos cátedras de la Universidad (Horticultura y Agronomía General) y, a causa de la tremenda inflación, tuve que conservar también mi cargo en el Banco de la Nación.

Como pueden imaginarse, para cumplir con estos tres cargos me veo obligado a estar en continua actividad, incluso los días feriados. Por suerte está ya resuelto un sustancioso aumento de los sueldos de la Universidad lo que me permitirá una dedicación fulltime.

En la Facultad de Agronomía estoy llevando una serie de trabajos experimentales con mis sweet potatoes que, dada la escasez de colaboradores y elementos de trabajo, me absorben mucho tiempo. También estoy preparando el material didáctico para el próximo curso.

Como habrán leído en los diarios, el gremio bancario de todo el país ha reanudado la huelga, que fuere parcial-

Eucumán

mente levantada la semana pesada. Próximamente también lo hará el premio de petroleros. No se ve muy clara si el gobierno podrá satisfacer los pedidos o tratará de frenar estos movimientos con la fuerza.

En estos días Eucumán casi ha quedado sin autoridades a raíz de las numerosas renunciaciones de jefes de reparticiones y profesionales motivadas por el tropello cometido por la policía contra un candidato frondista. • Pienso que la ayuda a esta valiente actitud le asegura el triunfo de Frondizi en Eucumán.

Pero el asunto que más me ha preocupado últimamente ha sido la operación del papá de Elba, a quien le extrajeron un tumor adherido al intestino. Contra las opiniones previas a la operación, resultó ser un cáncer de gran malignidad. Se ha recuperado rápidamente de la operación, tanto que está también en San Pedro de Colaba, pero el pronóstico médico (que los padres de Elba ignoran) es que difícilmente podrá llegar hasta fines de año. Estamos realmente consternados ante esta

fatalidad. El estaba tan convencido de que se trataba de algo sin importancia que me propuso operarse sin avisar a la familia para que no interrumpiesen el verano.

Ahora un pequeño pedido: He recibido de L.S.U. la comunicacion del documento de \$28 por "income tax" correspondiente a 4 meses de mi "assistentship". Recordando lo expeditivos que son en U.S.A., pienso que con una breve gestion de alguno de Ustedes podrian depositar los \$28 en mi cuenta del Louisiana National Bank. Van adjunto los certificados de que no nos correspondia pagar income tax y la comunicacion de L.S.U.

¿ Como siguen los problemas de L.S.U.? Periodicamente recibes la revista "Alumni L.S.U. News" por la que nos enteramos de algunas novedades.

Me permito recomendarlos al Ing. Luis Mentz, exalumno mio, que viaja junto con su senora en un avion contratado por los industriales azucareros de Guaymas para una gira por U.S.A. Llegaran a Baton Rouge a mediados de Marzo. Mentz es tecnico de la empresa azucarera mas importante de Guaymas (Cia. Azucarera Guaymas S.A.) que posee 4 grandes ingenios.

Esperando sus noticias y con cariños para Maxim y Boris, reciben un cordial abrazo de

Franco y Ella

Dr. Bernard Lowy
3350 Lake Street
Baton Rouge, Louisiana

Dear Dr. Lowy:

Recently I have done some literature search on a parasitic fungus in the order Laboulbeniales. I would like to do some physiological studies of the organism to get a further insight of their specificity for their host and to attempt to answer some of the puzzling questions about this order.

In discussing this problem with associates of Dr. Richards of the St. Paul campus, I found that you aided Dr. Richards in his studies of the Herpomyces sp. by sending him infected cockroaches. However, the cockroach colonies which Dr. Richards has are no longer infected due, it is thought, to the dry atmosphere created by winter heating. Therefore, if I may ask a favor of you, I would greatly appreciate it if you could send me some infected roaches (American or German). I realize that they must be trapped and this takes time, which is a very valuable thing to most of us. However, since this study promises to be very rewarding, I would like to hear from you.

Most sincerely,

Walter Fluegel

Mi estimado amigo:

Tengo el agrado de presentar a Ud. a mi amigo el Dr. Bernard Lowy, Profesor de Micología de la Universidad de Louisiana, U.S.A., quién se dirige a ésa en misión de estudio. El Dr. Lowy ha dictado un curso de Micología en la Escuela Nacional de Agricultura de La Molina por invitación de la Fundación Fulbrigh de los Estados Unidos de N.A.

Apreciaré en todo su valor cualquier información a ayuda que pueda Ud. prestar a nuestro colega.

Tengo muy presente el contenido de su última carta en la que me solicita material de estudio. Dentro de unos días espero hacer un viaje corto de varios días y creo que será posible conseguir algo en las lomas no obstante que el invierno no ha sido tan bueno en la costa.

Reciba mi agradecimiento y un saludo afectuoso de su amigo y colega

Greetings Bernie + Sarah and family. When
are you going to hit the New York area and
introduce me to Sarah down. I trust everything
is going well with you at La. State. I have enjoyed
your reports and someday this Spring I'll send out
some to you. They have been piling up for several years
with no time to distribute them except for those requested.
This is a busy life but a happy one in teaching and research
and my escape to Cape Cod (to work) every summer
is a great relief from City-life. Wouldn't it be
wonderful to get together and have a chat. We have
much back-log to catch up in both our lives Bernie.

UNIVERSITY OF ILLINOIS
DEPARTMENT OF BOTANY
URBANA, ILLINOIS

Wednesday afternoon

Dear Bernie -

Before I'm accused by you of being influenced by the company I keep, notably Van Rogers, and thereby slipping into a no letter writing mood, I shall write. The day that you left Baton Rouge for the Uthmaniyah meetings a letter arrived from Van. It was a surprise as usual. He said that he saw you at the meetings and I'm certain that by now you know that Ferguson at the New York Botanical Gardens is to get *Mycologia* out. Van says that it had become too much for him and I can see why now because for one thing he did all of his own typing of the manuscripts for the publisher, and with no help he got farther and farther behind.

My work is progressing quite well. I went get through my pile of leaves before June but I should be well along the way. Currently I'm accumulating specimens from various herbaria to make a study of the imperfect genus Rubilarda. This fungus was among five different types found on the *Carya* leaves that we collected at Post Hudson in August. There were ^{several} described many species in the genus however at least three of

clearly belong somewhere else.

The family is fine and all of them are enjoying life here in Urbana. They may not want to leave when the time comes.

We keep up with developments there by reading the Advocate. From all indications the area is due some spirited activity this weekend when the legislature meets in special session.

Collins' visit he joining us at Southern. He is taking a position at Queens College in New York.

I hope that your work progresses well. Since I have numerous pertinent references available here I have begun a card index on the fungi reported from Louisiana. Perhaps we can get together on it next fall.

Regards to the family.

Very truly yours,

FRE

1961-

Hell!

January 3

It is now the new year - well part Christmas, 1960
but I am enclosing our greeting card anyway. It
would appear as if I am becoming unduly influenced
by the company that I am keeping.

Thanks very much for the report on the
"deliberations" of the legislature. This report
was surely more complete than the newspaper
account. Of late I have been following

the case involving McNeir. I had hoped
that some statement indicating moral support
would have come from the Southern
AAUP chapter. Jones probably tried to
get them to do something. I'm sure but
no doubt met considerable opposition from
the cautious and status quo members.

My guess now is that Baton Rouge
will be the battle grounds come Septem-

ber. The possibilities are excellent though I think that considerable turmoil will be avoided as a result of positive action on the part of the Kennedy administration. More and better influence could be exerted by the chief executive's office and I think that some of the pressures by the segregationists may be alleviated. This won't be the panacea but it should help a great deal.

We were in the east for the holiday season. I spent three days of that period in New York City attending the AAAS meetings. There was very little of a mycological nature presented but there were some good programs of general botanical and scientific interest.

Did you know that Jones has been the recipient of an NSF science faculty

fellowship and is to spend nine months at
College of the Pacific and two months at Woods
Hole. This program begins next September.

The work continues to progress satisfactorily.
It will be a long time though before I
will finish reading through this pile of leaves.
Bert wishes to the family. Don sends
best regards to you.

Sincerely,

FRED

Commemoración del Sesquicentenario de la Revolución de Mayo

1961

University of Michigan
BIOLOGICAL STATION
Sheboygan, Michigan
Pellston,

Thursday, July 6

Dear Bernie:

Thank for the reprint. It jolted me out of my lethargy in correspondence. As you can see I am now here at Douglas Lake and I have been sectioning mushrooms to study there anatomical details with Dr. Smith. The session here opened on June 24 so this is near the end of the second week.

I left Urbana during the second week in June. After driving the family to Rhode Island to spend the summer I drove back across to Michigan.

Since you have already spent a session here you already know what the station is like. I am studying the fleshy fungi and taking the freshwater algae course given by Dr. Sparrow. Dr. Sharp is here teaching the bryophyte and the lichens course. Collecting of mushrooms has been fair. We have had ample rains but have generally had low

University of Michigan
BIOLOGICAL STATION
Cheboygan, Michigan

temperatures. Were out practically each day to scour the various woods.

A Dr. Derek Reid is here from here. He says that he knows you through correspondence and sends his regards. He also asked me to relay his request for a reprint of the paper on Bolivian tremellaceous fungi. There is another request for a reprint too. Arson Miller who assists Dr. Smith and will be working with the Forest Service in Idaho this fall would like a reprint of your paper on Louisiana polypores.

I nearly finished the study of the imperfect genus Robillarda before leaving Illinois. If I can find the time here I should finish all the drawings and the paper.

I hope that your summer is being a pleasant one. Shall hope to see you in Indiana at Purdue and back in Baton Rouge later. My regards to the family.

Sincerely
Fred

AUG. 9, 1961

University of Michigan
BIOLOGICAL STATION
~~Cherboygan~~, Michigan
Pellston,

Wednesday morning

Dear Bernie:

The collecting here has been very good, in fact, Dr. Smith says that conditions haven't been this good in many years, As a result we have kept rather busy. This week though the hunting has been poor and today we are remaining around the station. I received the specimen that you sent, had trouble finding it on the twig at first, but after examining the twig carefully with the highest powers of the binocular microscope I did manage to discover that you weren't jesting about a mushroom being present. I would have located it a lot easier if you had indicated that it was on the order of some minute imperfect. Actually it didn't pose quite the problem in locating it but it has posed a problem in determination. I thought that it might be either a Marasmius or a Crinipellis. You probably checked Marasmius species in Singer's work and discovered that it didn't fit anything to well there. It has the hairiness of stipe and pileus that is more or less common to some of the Crinipellis species. I have made a few sections of a portion of the pileus but haven't had a chance to study them carefully. The upshot of all of this is that as yet there is no certainty about a name. Dr. Smith says that he would like to see more of the fungus if you can find more.

Yes the quadrilateral lithoplane is still here and still used for the regular Wednesday and Saturday night square dances. This is always preceded by volley ball. We have made several trips up to the Upper Peninsula and will probably go up again a couple of times this week. The bridge is certainly a great help because we don't have to leave before 7:30 for the trips up there.

It is indeed good to hear that you are going to undergo a period of indoctrination in the principles and philosophy of phytopathology. I expect to be at the AIBS meetings but probably won't arrive until the afternoon of the 28th. The family will be with me and we will leave on the 30th to make the trek back to Baton Rouge via Urbana and St. Louis.

Regards to the family. I will see you at Purdue.

Sincerely,

FRED

Eucumán

Junio 9 de 1961

Dear Sarita and Bernard:

Hace unos días fui con Guerinéau a visitar una finca que he comprado en sociedad con un conuñado, a unos 60 km. de Tucumán. Fue una buena oportunidad para recordar las experiencias agradables de L. S. U. y manifestar una vez más mi reconocimiento y afecto por la familia Lowy.

¿Cómo están ustedes? Nos imaginamos a Maxine y Boris hechos unas señoritas.

Nosotros esperamos la llegada de la cigüeña dentro de diez o quince días. Suponemos que será el futuro ingeniero agrónomo de la familia. Hay gran expectativa por parte de Sylvia y Sonia que ya están planeando los cuidados y juegos con el nuevo hermanito.

Yo sigo trabajando con mis betetas

realizando pruebas con las nuevas variedades tucumanas obtenidas en mis cruzamientos. Ya van a salir las primeras publicaciones sobre los trabajos que inicié a mi regreso de U. S. A.

Hace unos meses recibí nuevas publicaciones del Sr. Martin. ¿Le podría transmitir mi agradecimiento?

Ahora una molestia para Bernard. Recibí una nota de "L.S.U. Alumni Federation" comunicando que he recibido mi suscripción honorífica de 3 años a la revista "L.S.U. Alumni News". Me parece recordar que la suscripción es de \$3 anuales. Yo desearía cubrir el máximo período de suscripción con el giro de \$12,50 que Bernard me remitió el año pasado, y que ahora devuelvo adjunto.

Seguimos soñando con hacerle una visita. No perdemos las esperanzas.

Con el cariño de siempre para toda la familia Lowy, un abrazo de

Fausto

S. M. de Tucumán, octubre 23 de 1961

Queridos Sarita y Bernard:

Dentro de pocos días llegarán a L. S. U. tres compañeros de profesorado de la Facultad de Agronomía de Tucumán; ellos son:

Ing. Agr. Hector D. Cirelli, Prof. de Maquinaria Agrícola.
" Victor Hernsey, " " Cultivos Industriales.
" Edmundo Cerqueira, " Cane de Azúcar.

El objeto principal del viaje es asistir a un curso sobre maquinaria para cultivo y cosecha de caña de azúcar en Jeanerette, La., en donde permanecerán hasta el 28 de octubre. Luego quedarán una semana en New Orleans y de allí pasarán a L. S. U. La permanencia en U. S. A. será de un mes y medio, incluyendo un viaje a New York.

Con seguridad que los colegas van a tener dificultades con el idioma y no tendrán tiempo de adaptarse al ambiente, de modo que necesitarán una buena ayuda para poder aprovechar el breve tiempo disponible.

¿Podrán alojarse en Pleasant Hall durante los días que estén en L. S. U.? En todo caso necesitarán encontrar un lugar económico en Baton Rouge. Yo me permitiré recomendarlos que hablen al teléfono DI-2-7134, a su llegada, para recibir la orientación concreta al respecto.

El hermano del colega Cirelli, capitán Victor Cirelli, ex-administrador general de la Flota Argentina de Ultramar, es quien facilitó nuestro viaje a U. S. A. en las difíciles condiciones económicas en que nos encontrábamos en aquella época.

Desde ya ¡muchas gracias! por la ayuda que pueden prestar a la delegación Tucumana.

Recibi una linda tarjeta de L. S. U. Alumni Fund por "\$5, the First annual gift - Courtesy of Dr. Louy". Nuevamente ¡muchas gracias! por la atención. Me temo que el giro remitido, si es que no fue "sustraído" por el Correo Argentino,

Journal

En el resto de siempre

Me son obvio para Toda la Louy's family

no change, pero Toda & para sus hijos, queda anulada
 en volver por los documentos de padre. Tengo la impresión
 de que estoy debiendo los \$5 a Bernard. De pago ordenado.
 ¿Como saber el resto? Me refiero a que en primer
 actividad del "fall number". Siempre que mi amigo
 Maximo de la otra fecha Toda me devolvió muy satis-
 fecta y sería ya en orden de importación.
 Desde hace dos meses tengo una buena impresión por
 mi lo impreso como miembro del Consejo Superior de la
 Universidad en representación del cuerpo de profesores. A "big
 shot", como dicen a L.S.U. Como elemento independiente,
 voy a participar de la lista entre los de Anderson, según
 voy a saber, de misito ambiente universitario, con don-
 no actual de los primeros.
 Tanto de los presentes condiciones de Toledo y la ma-
 ridad económica de múltiples actividades, algo bastante diferente mi
 "newest photo research". There are a number of books
 titulado "Industria de algodón y transformación a la otra mediante
 ingente sobre Thomas Jefferson". A propósito, el año pasado
 escribí al Sr. Ben Hernandez, relacionado del Sr. Miller, con-
 cerniendo sobre antecedentes de dicho país de importación, sin obtener
 respuesta. ¿Será muy probable que Bernard Tolson
 o Dr. Miller enseñando a hoy algo publicado al respecto?
 En Toda la bibliografía a mi alcance no he encontrado nada.
 Incluso a mi hermano Joe West. Siempre estoy a
 tiempo para incluir alguna referencia en mi trabajo.
 Con ello algunas referencias con un poco de L.S.U.
 y una visita a Highland Park Dr. Si se opusiera en
 plan sobre fitoterapia de la otra, la financiación con
 fondos del INTA (Instituto Nacional de Tecnología Agro-
 pecuaria), algo sobre a mi cargo, también en campo
 L.S.U. en enero de 1963.

ATLANTA UNIVERSITY

ATLANTA 14, GEORGIA

THE GRADUATE SCHOOL

Department of Biology

Dear Bernie:

I have been threatening to write you a note since September. It has taken me this long to begin to make good on the threat. Other things have interfered however as you might suspect. There has been the problem of getting located and oriented in the new place. All has gone well though and we are beginning to feel like full fledged residents instead of new comers.

We left Baton Rouge the latter part of August. We imagined at the time that you folk were beginning to make plans for the return to the Baton Rouge environs. I am sure that your summer must have been a profitable and pleasant one. We received your card during the latter part of June. Don Rogers was visiting with us when it arrived. We had a very enjoyable time with him. There was a chance to take him out on about three different field trips while he was with us. It happened that the weather was cooperative for we had had several good showers a few days before Don's arrival.

Thus far we find that we like Atlanta very much. The progress here is real and the general prevailing attitude on campus and around the city is quite different from Baton Rouge. Of course the city is yet a far cry from a utopia but the evidence of the progress thus far is very gratifying.

The university center is not nearly the size of Southern. There are six colleges associated to form what is called Atlanta University Center. I am on the faculty of Atlanta University which has been the graduate school for the center. The facilities here are

reasonably good and are being improved. I am located in a new building which is at present only a one story structure. Two additional stories are to be added. Botany represents a new field for the university. As a result I find it necessary to order everything for nothing botanical was on hand. Much of the equipment and supplies ordered thus far has arrived and as a result I have not been severely handicapped in the two courses being taught. Obtaining library references has been a somewhat slower process. Practically nothing in botany had ever been ordered by the library for even though the department has been called a biology department and has offered degrees in biology they have in fact been degrees in zoology.

The two courses that I teach are general botany and plant morphology. I have a total of 15 students in both classes. The number of students in the classes will increase though after this semester however now that it is becoming known that some botany courses are available.

Thus far I have had only two or three opportunities to look around in woods near Atlanta. Here the distance to a good wooded spot requires driving several miles from the campus. I have had the morphology class out on a few trips and found some interesting things. The prospects appear quite promising in the places we have visited.

I hope that your year has got off to a good start and that you aren't overloaded with classes again. My regards to the family. Should you come this way at all I will expect you to stop at least an extended moment.

Cordially,

"FRED"

Tapachula, Chis.

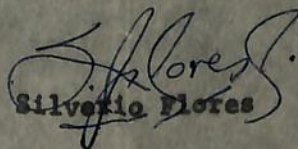

Muy estimado amigo:

Tengo el gusto de recomendar a tus finas atenciones al Dr. Bernard Lowy, Profesor de ésta Universidad, quien tiene en proyecto hacer una corta visita a Tapachula que consistiría en viajes de campo, especialmente a la zona húmeda cercana al volcan.

Bien, Dr. Lowy se dedica al estudio de los hongos y tiene un gran cariño por la Micología. Ha visitado muchos países americanos, habla perfectamente el español y entre los estudios científicos que ha hecho en México a visitado tu tierra natal, Oaxaca, de manera que sus propositos actuales van encaminados ahora a coleccionar especimenes de Tapachula (region). Ojala que pudieras acompañarlo en su recorrido.

Al solicitarte este favor, lo hago con el caracter de amigo, porque Dr. Lowy fue mi Maestro en la Escuela de Graduados y en lo personal conservo una especial estimacion para la familia Lowy de quienes hemos recibido siempre, sólo atenciones. Entonces, ahora que el necesita éste favor, yo quisiera que me ayudes para corresponder en el mismo plano.

Te agradeceré infinito tus atenciones. Sin mas por ahora y con mis saludos para tu señora y los niños, quedo como siempre tu amigo y servidor

ATLANTA UNIVERSITY

ATLANTA 14, GEORGIA

SCHOOL OF ARTS AND SCIENCES

Saturday morning

Dear Bernie:

I was in Baton Rouge for one day during the Easter period and called your place a couple of times but failed to get an answer. I suspected that you and family were out of town on this occasion also. I had been to a meeting, NSF institute, out at the University of Texas. While there I had a chance to visit briefly with Alexopoulos. He was leaving next day for a collecting trip to Mexico.

You will have a mycologist to caht with at Southern next year. O'Neil Collins has decided to take a position at Southern beginning in September. He was persuaded to return to his alma mater from Queen's College. Queen's offers no opportunity for research and he only had general botany to teach there for no advanced courses were offered in botany. After long deliberation he has decided to try teaching at Southern at least for a year. He would have come here if they had opened up another position for a botanist btu this opening probably wnn't occur until next year. The facilities here need expanding and construction for further expansion should begin within a year.

I imagine that you will be off to Costa Rica within the next few weeks. Because of this I knew that I should not delay any longer this note to you. I will be in Atlanta this summer teaching a couple of courses in the summer session. In August we will probably drive up east to visit with my wife's folk and to attend the AIBS meetings. Since you will be south of the border I imagine that you won't attempt to return in time to be in Massachusetts for the meetings. Speaking of meetings I had hoped that you would have attended the ASD meetings this year down at the University of Florida. Sims was there from Southern. Next year you should attend for it will be held here in Atlanta at Emory University.

Occasionally I hear from Woodrow Jones. As you know he decided not to return to Southern last year after his NSF fellowship tenure ended. He is now with NASA in California. I expect him to return to teaching someplace some day for I don't think that he will be completely happy with fulltime research with a governmental agency. Usually in those positions the research is directed or "managed" research and can become rather routine. For the time being he has mainly wanted to have some relief from the tensions and pressures of the south.

The work here progressed very well. Working principally with graduate students has enabled me to get several little projects underway. Some of the students are very good and could have as bright a future as Collins eventually. Others leave much to be desired. The whole graduate program in the department needs considerable upgrading in my estimation. There is a plan to begin a doctorate program in biology but I am certain that the department is not ready for this either staffwise or facilitywise. I am certain that there will be no doctoral candidates in botany.

My regards to the family. I wish a very pleasant summer for all of you. I may be in Baton Rouge again during midsummer but will miss you since you will no doubt be far away. The family joins me in sending warmest regards.

Dr. Oswaldo Fidalgo
Secretaria de Agricultura
Instituto de Botanica
Caixa Postal 4005, S. Paulo
Estado de Sao Paulo, Brasil

Dear Dr. Fidalgo:

Enclosed is a reprint of the polypore paper you requested along with another on Bolivian Tremellales. The latter group have interested me for several years during which time I have been working chiefly with those of the American tropics.

Although I have seen some Brazilian material, I would like to examine as many representatives as possible from your country. My idea is to eventually survey all of Central and South America, toward which end I have made a very modest start. In 1959, I was with Dr. Singer in Tucuman and Dr. Wright in Buenos Aires following a Fulbright teaching assignment in Peru. During that interval I also went to Bolivia. This past summer I spent in Mexico collecting tremellaceous fungi there. After quite some delay, a paper on Argentine Tremellales is to appear in the next issue of Lilloa and another will soon be in press on the Mexican species. Within the next few years, it may be possible for me to go to Brasil for still further study. In the meantime, any duplicates of Tremellales you might be able to send me, I would appreciate greatly.

Sincerely yours,

B. Lowy

Dr. Bernard Lowey
Department of Botany
Louisiana State University
Baton Rouge, Louisiana

Dear Dr. Lowey:

It has been suggested to me by Dr. Blum that I contact you concerning a friend, now in the Peace Corps stationed in Ecuador, regarding the possibility of his attending LSU on the graduate level (M.S.).

Robert Morgan has his undergraduate degree from one of the state colleges in the state of Washington with a very heavy emphasis on botany, especially in the area of mycology. From his letter I gather that Robert has worked for or taken classes with Dr. D.E. Stuntz at the University of Washington. He has written me that in his junior year he attained a grade point average of 3.15 and in his senior year a grade point average of approximately the same. This is, of course, based on the four point system.

At present Morgan has gone to Isla de la Plata to continue the herpetological collecting that was initiated last year. He spent more than two months in the upper Amazon basin on the Rio Napo with me last summer. He plans to do more collecting with me this summer in the Ecuadorian Oriente. Thus, other than his interests in mycology, he has become quite diversified in vertebrate zoology.

Other than his collections in vertebrate zoology Morgan has done extensive mycological collecting. And, as I mentioned earlier, he will continue his collecting this summer in the Oriente as far out as Iquitos in Peru.

Should you be interested in corresponding with Morgan or should you like me to write to him in order that he contact you his address is: Robert Morgan, Voluntario del Cuerpo de la Paz, Embajada de los Estados Unidos, Quito, Ecuador. He plans to return to the U.S. in late August or early September depending upon his immediate future in the Ecuadorian collecting program.

Yours Sincerely,

Charles M. Fugler

Auburn University
Auburn, Alabama

Dear Dr. Fugler:

Thank you for your letter concerning Mr. Robert Morgan. Should he so desire, I can see no impediment to his applying for graduate work at L.S.U.

Your visit to the upper Amazon, along the Rio Napo sounds very interesting. I know the Iquitos region but didn't get to the Napo. Within the next few years I hope to get into Amazon country again. This summer, however, I plan to leave for Costa Rica early in June and shall probably not return to Baton Rouge before September 10 or so. If we don't meet in Auburn or Baton Rouge, it might be in Benjamin Constance or Manaus.

Sincerely yours,

B. Lowy

Dear Bernie:

We missed not seeing you at the ASB meetings. When I received the program I saw that you were scheduled to be there and I was looking forward to seeing you. Doerpinghaus and Welden were also looking for you.

Will you teach this summer or will you be off to Central or South America again? We may visit in Baton Rouge for three or four days during the first week in June. If so, perhaps we can get together for a day for some collecting.

Best wishes.

Very truly yours,

Frederick

L. Frederick

April 25, 1964

Dear Fred:

I much regretted having to miss th meetings in Atlanta but it couldn' be helped. This summer I'll be in Costa Rica aided and abetted by a grant from the NSF. The University - in San Jose- has also invited me to contribute to the writing of a mycological "Flora" of the country. Alexopoulos is doing the Myxos. I want to go south as early as possible but will probably be here through the first week in June, so please be sure to call me when you get in or let me know beforehand about when you expect to arrive. With this note I send you the news of my elevation to the exalted rank of Professor. I remember one of my college teachers in Brooklyn, who used to deride the full (which he pronounced "fool") professors, who, he said, could always be distinguished from their colleagues (in those days) because they flashed a heavy gold chain across their belly buttons said chain laden with the trinkets and baubels of Academia. But that breed has mostly died out and today almost any fool can aspire to be a "full" ... present company excepted, of course.

Hasta la vista

Muy estimado amigo,

Ayer a la mañana llego a mi oficina su emisario- el chasqui estilo moderno-Sr. Portocarrera, trayendome su regalo regio de pisco. Mil gracias por su finisima atencion!

Ya estamos en plena actividad universitaria y estoy esperando, un poco ansioso, los varios paquetes de hongos que mande por correos Costarricenses. Supongo que por fin llegaran. Todavia no tengo la palabra definitiva en cuanto a mi proyecto Brasileno pero creo que la Comision Fulbright me avisara dentro de pocos meses, muy probablemente antes de fin de ano.

Lamento que no tuve la oportunidad de verle a su regreso de Edinburgo porque me hubiera gustado mucho tener sus impresiones del Congreso. Ojala que fuera util su viaje. Sali de San Jose el 21 de agosto, que segun su ayudante Sr. Barlow, correspondio a la fecha de su llegada.

Sin nada mas por el momento, reciba un abrazo fuerte de su amigo

Le agradezco bastante el obsequio que me hizo de los boletines titulados:

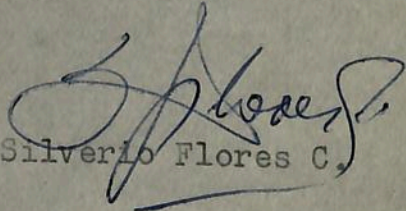

"A New Genus of the Tulasnellaceae"
"New Species of Tremellales from Guatemala"

Lo felicito por tan interesantes aportaciones a la Micología y también por su próximo viaje de estudios al Brasil. Ojalá tenga una agradable estancia y que sus -- investigaciones tengan éxito.

Junto con la presente le acompaño un ejemplar de divulgación, sobre una de las plagas más importantes de la caña en México, Trinidad y Brasil.

Hágame favor de presentar nuestros saludos a su Sra. y a las niñas. Mela y los míos están sin novedad y con muchos deseos de ir a pasar unas cortas vacaciones a - Baton Rouge.

Lo saluda afectuosamente,

Silverio Flores C.

28 de Abril de 1965

Muy estimado amigo Silverio:

Le agradezco mucho su amable carta que recibí junto con la separata del trabajo escrito por Vd. y sus colegas.

Este último me interesa bastante, no solo porque representa una contribución sumamente útil para los agricultores, mas también porque Vds. se han dado cuenta de la importante posibilidad de buscar métodos de control biológicos contra esta plaga de la cana. En mi humilde opinión, a pesar de que la aplicación del principio biológico a los problemas de control de diversas plagas es algo difícil (en general), debe ser no obstante (en muchos casos) la manera mas sana y razonable de acercarse a la solución definitiva de estos problemas.

Reciba Vd. los afectuosos saludos y los mejores recuerdos a su Sra. y a su familia, de

B. Lowy

queridos Anita, Bernard y chicos,

Ya les habra contado Bernard mi "trabajo"
diario, pero en realidad eso no justifica mi
pereza para escribir.

Perese Anita, no te preocupes como echamos
de nuevo a Bernard. El Domingo fue un
tanto triste a la hora de la mesa pues no
estaba el querido amigo. En desquite fue cuando
fue vivo a almorzar, comentaba con pena
la ausencia de tu marido.

Mamiya (le 2º) todos los días hace el
disco que le regalo. Y los menores hablan
sin cuando va a venir el Sr. Bernard.

Te dije que he dejado un gran vacío.
Es que en charla es un regalo para
todo.

Te gusto la foto que nos sacamos en
la comida del Rotary.

La Facultad todo está admirado
de la delicadeza del Profesor Nortemann
caso que no ha permitido que le paguen
la cuenta del Hotel.

Fue una lastima que no tuvieran lista
de habitación nuevas. Está casi al terminar,
pero los se necesitan algo mejores.
El carpintero prometió terminarlo en junio
pero no cumplió.

¿Cuándo te verá Santa? Dentro de unos
7 años? Para antes quizás.

Te dije que en el libro no hay unicola
yo y yo creo que Ben Wilbink está
nuestro de operable e Bernard un "her
posición argentina".

No está de una pensión no?
¿qué me dice de la argentina y de la B.A.
puedo?

Ya te hablé en todo Bernard le despen
toda de la Policía Federal y
mi copia como consecuencia de
ello.

SCHOOL OF ARTS AND SCIENCES

May 4, 1965

Dear Bernie:

Should I delay writing this note any longer I fear that I will have to send it to South America instead of Baton Rouge. It was good to read and to hear that you have another leave of absence for a grant to work again way south of the border. It was also good to read that you were becoming a TV personality and were advancing the cause of the fleshy fungi. Your very good and abundant work is continuing.

Thank you for your kind letter concerning the award that I received some time back. I was completely astounded by the announcement for I didn't really consider myself eligible for consideration, being a comparative newcomer. I have had some very good students here and they have tended to provide quite a good challenge. Out of the group I have engendered one or two fungus converts.

The ASB meetings were pretty good this year. There weren't many mycological papers however. I took about seven students along and they enjoyed their first outing of this kind. Kent was the only person that I saw and knew from LSU. Asa Sims was there from Southern.

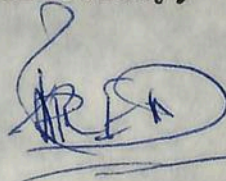

Did you know that Ray Collins was leaving Southern in September? He is taking a position at Wayne State University, the position that Maniotis now holds. Collins had a similar offer at Ohio University in Athens, Ohio but turned it down in favor of Wayne.

Although this building is only three years old we are now in the process of adding on a second story. Construction has begun and you can imagine the interference this causes. The floor is to be completed by September and then perhaps we can proceed to further develop the program here. There will be a small herbarium on the second floor and I will have a place to properly arrange and store specimens,

Wade Mackie spent the night with us a few weeks ago. He brought us up to date on some of the changes and some of the still prevailing problems there. He mentioned that he saw you folk rather regularly.

We trust that your family is fine and I am sure that all look with great anticipation to your trip and stay in Sao Paulo. My family is fine and all send warmest regards. Our very best wishes to you for a fine, rewarding, pleasant, and productive year.

Sincerely,

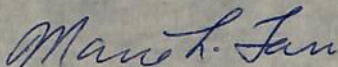

Dear Dr. Lowy:

Dr. C. J. Alexopoulos has brought to our attention the fact that Professor George W. Martin is celebrating his 80th birthday this year. To honor him on this occasion we are planning to surprise him during the A.I.B.S. meetings with an "Iowa Reunion Luncheon" in the Adult Education Center, University of Maryland on Monday noon, 15 August (see enclosed menu). Dr. Martin has already accepted the invitation to the Luncheon (without knowing its real purpose, of course) and we are hoping that as many of his former students and close associates as possible will attend.

Since Dr. Martin would surely not appreciate any great formalities, some of us feel that a brief presentation of a giant "Teacher Rating Sheet" (see enclosed rough sample portion) would be an idea suitable to the occasion. The Rating Sheet would be in the form of a long scroll containing the signatures of all former students and a uniform rating as shown on the sample. Alternative suggestions are, of course, welcome.

Please fill out the questionnaire below and return it to me as soon as possible and not later than 20 July. Payment for the luncheon should be by check or money order made out to me.

Sincerely yours,

Marie L. Farr

AN IMPORTANT POSTSCRIPT ON THE IOWA REUNION LUNCHEON:

Any personal messages or mementos to Dr. Martin, in the form of letters, telegrams, photographs etc. will be welcome, especially from those unable to attend the luncheon. If enough of these accumulate, they may be presented to GWM in a collecting-basket of the type he always carries on field trips.

Dear Bernard:

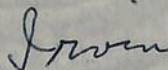

We all really enjoyed your newsy letter. There's no doubt that you are in "hog heaven" among the Tremellales. We know you are enjoying your work.

Your \$50.00 contribution to the "C. W. Edgerton Memorial Fund" brings the total up to \$1450.00 (not bad, eh.). We have it in Citizens Building and Loan, drawing 4 1/2 per cent. Together we will decide, in time, how to use the money. I'm sure "Doc" would have expressed one of those wry smiles if he had seen your check arrive. Our thanks, for him.

Things here are rocking along. Chilton and Sinclair are working on building plans. It will be 3 years before we are in the new edifice, apparently.

A happy New Year to you and the family. Write again when you find time.

Sincerely,

Irvin Forbes, Professor
Department of Plant Pathology

Apts 31-66.

Juan de Sanz y Bernard.

Martin accipit, el Ing. Agr. José

Maniotti y su señora Floria Martiñez, van a L. S. U.
por un año. Les agradeceré los orienten en lo
que Uds. puedan.

El Ing. Maniotti va a trabajar en "Statistics" con
Dr. Henderson. Es becario del "consejo de Invest.
Investaciones Científicas y Técnicas" y estará un
año o algo más en B.R.

Recibe la carta por Xpus? ; cómo está todo

Uds?

Pienso que Fausto se encontrará con Maniotti y
podrá acordarse de cosa de "10 years ago". Yo
le di algunos datos pero me temo que
está bastante atrasada por lo recurre a
Uds. - Si pueden escriban pronto. Me
imagino que estarán bastante atareados después

de un año de ausencia. —

Con el cariño de siempre.

Caso Bernardo:

Há bastante tempo que estamos
para escrever-lhe, mas a falta de
tempo nos tem colocado em falta
com os nossos amigos.

Os prazos se aproximam o fim
do nosso período em New York e
há sempre um monte de coisas que
gostaríamos de terminar antes de
virmos para a Europa.

Desde que deixamos Beltsville
a nossa vida tem sido bastante agita-
da apesar de um tanto retineira.

Estamos agora concluindo o segundo
fascículo da nossa série sobre Polypo-
races de Trinitad. O primeiro deve
ser publicado agora no próximo número
de *Mycologia de Nov. Dec.*

No outro lado estou escrevendo também
o meu tratado sobre Polyporaceae de
Philippines, enquanto Enyde está con-
cluindo um estudo sobre Hexagona Japonica.
Conforme você pode ver peço que
nos mande correios e risco de novéis
de t'edio.

Aqui vai o nosso grande abraço
para você com os vossos, para você e

Toda sua família de um
Feliz Natal e
Ano Novo.

Wishing you a
Merry Christmas

and a very

Happy New Year

Osvaldo *

Dear Bernie:

I picked up the enclosed specimens back in November and haven't been able to run it down. Would you take a look at the material and identify the specimen? I found only two sporophores. They were on the under side of a section of a log in a stack of logs that had been piled up near a creek in a wooded area just west of the Atlanta city limits. Its an area that I've collected quite a bit in. Several discs were also on the log sections as well as some myxos. Should the material prove interesting to you, Keep both specimens as long as you wish. Sometime or other I would like to have one of the specimens back should this prove to be something that you don't already have in your collection.

The work here progresses but more slowly than I prefer. Will you be attending the ASB meetings this year? If so, come by way of Atlanta.

Sincerely yours,

(REI)

February 20, 1967

Dear Fred:

Your interesting collection is, as well as I can make out, a Favolaschia. I don't have it in the herbarium so I'll take you up on keeping a part even though I don't deserve it. If you consult Singer in *Lloydia* 8: 170-230. 1945, on the Laschia complex you will find what I think comes closest to your specimen; perhaps F. cinnabarina (Berk. & Curt.) Pat. (see page 204 and photo), but it is not this. I collected Favolaschia sprucei (Berk.) Singer, (described by Berkeley as a Favolus) in Brasil, but this is quite a different creature. Enclosed are my sketches of microscopic details.

I am working on Brazilian Tremellales and a number of novelities have already shown up, Moller did a fine job on the Tremellales which he collected mostly in the Blumenau region where he stayed for about three years but he didn't find them all.

I tentatively plan on going to Costa Rica again this summer but nothing is settled yet. I don't expect to be at the ASB meetings but may be in Atlanta at some time in the indefinite future to visit my sister and brother-in-law. Then we may be able to get together.

With best wishes, as always,

B. Lowy
