The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized version of an item from our Archives.

Usage guidelines

We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

About the Institute

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

Nº 1421 - Gen. nov. ?

Con flores - Mayo 12 de 1907. - Cerro San
Antonio de la Cal - 2000 metros

Flores dispuestas en racimos fasciculados en las ex-
tremidades de las ramas, siendo su inflorescencia cen-
tripetal. Tienen el cáliz verdoso, quindí-lobado o quindí-
si-partido y una mitad más corto que la corola. Es ésta
lo mismo que la flor en general, perfectamente regular,
de un hermoso color amarillo de oro, y compuesta
de 5 pétalos libres e hipoginos (tent. de largo.) Su androceo
se compone de 10 estambres filiformes, iguales a los
pétalos en longitud, libres, hipoginos, gruesecitos y
fimbriados en la base, de anteras orbiculares, dor-
sifijas e introrsas en la prefloración, filocu-
lases y longitudinalmente dehiscientes. También
la legumbre es peluda cuando tierna

C. Conzatti

Muy estimado señor:
Me ha favorecido el interesante
cuaderno escrito por V. sobre las
"Relationships of the false Date Palm"
y al dar á V. las gracias por este
valioso obsequio me es grato
corresponder con un ejemplar de
mi Flora Sinoptica Mexicana
De V. afmo. atto. S. S. C. Conkatti

Sr. Prof. O. F. Cook:

Accepte usted mis sin-
ceros agradecimientos por
su interesante

"Ivory Palms"
