The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized version of an item from our Archives.

#### *Usage guidelines*

We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

#### *About the Institute*

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

Botanic Garden

Cambridge.

spring I have good plants  
for distribution. The  
discoverer of this  
plant was Rehman  
after whom Richardia  
Rehmanii is named  
and he found it in  
the Kansuwal about  
1878. It was found  
subsequently by Mr  
Jameson, whose name

it bears, in the  
Gold-field districts  
of Barber town,  
The individual plants  
vary a little in  
the color of the  
flower but all  
may be described  
as flame scarlet,  
some seem to have  
a tendency to salmon

color .

These above perhaps,  
since you have  
seen the specimen,  
may perhaps serve  
your purpose .

I have heard it  
remarked that - the  
plant - is like an  
enormous dandelion  
being immense  
scarlet - daisy's .

With kind regards  
trusting you are well

I am

Yours very faithfully

R. Swin Lynch
