About the Institute

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

Chartres, le 24 mars 1902

Chartres. 30/3 92

DOUIN

Cher Monsieur

Je viens de vous envoyer par
la poste 52 échantillons de
diverses hépatiques sur lesquels
vous serez bien aimable de me
donner votre avis, et 80 parts
de *Sphaerocarpos terrestres*.

Les parts sont petites, mais
chacune renferme cependant plus
de 100 pieds soit à anthéridies
soit à archégones.

Je vous en rémercierai M. J. Gué

furcata c. fr. dir. quelques jours.

J'appellerai tout particulièrement votre attention sur *Scapania nemorosa* (sch. jung) qu'on a souvent pris pour le *Scap. curta*.

Si vous le désirez, je puis vous réunir en 80 parts.

Scap. nemorosa Dum.
tr. jeunes avec feuilles
complètement dentées

Scap. nemorosa Dum.
st. et propagulifère

Scap. nemorosa Dum. c. fr.

Pendant les vacances, je vais compléter *Calypogeia sericeorum* et *Jung. intermedia*.

Je vais essayer aussi de

récolter *Cladonia nigrella* et rechercher *Ceph. dominici*.

Quant à *Scap. intermedia* mes et *S. undulata* var. *dentata* Dum., je crois pouvoir les récolter facilement en 80 parts pendant les grandes vacances.

Si vous pouvez me procurer un échantillon, même très petit de *Exymista pyramidata* (b.)

Notothylus utilis Dum.

et *Pluroclada lobulata* (Nideb.)

Cela me ferait le plus grand plaisir.

Merci à l'avance et
bien à vous

J. F.
